Introduction

The web based YourHerd management program has enhanced the power of CIS milk recording systems.

With tools that encourage farmers and their advisors to view the complete picture of the herd and investigate individual cows, YourHerd allows essential management decisions to be made without the need to spend valuable time searching through information from several different sources.

A secure login displays the whole herd and individual cow performance. YourHerd can also be used as a complete herd management program at no extra cost.

YourHerd Benefits:-

- Access is complimentary for all CIS customers.
- 24/7 access to input events, register new births with BCMS, access Breed Society links, download reports and movements.
- Track herd health and monitor disease prevalence.
- Benchmark your herd and track performance within region and nationally.
- Meet Farm Assurance legislation with linked movement book and medicine records.
- Short and long term production planning tools.
- View day to day action reports.
- Also available is the MobileHerd app for iPhone, iPad and Android devices whilst out and about on the farm.

Pop Up Blockers

If you cannot view a report, it may be because pop up blockers are enabled on your web browser.

1.0 Logging into YourHerd

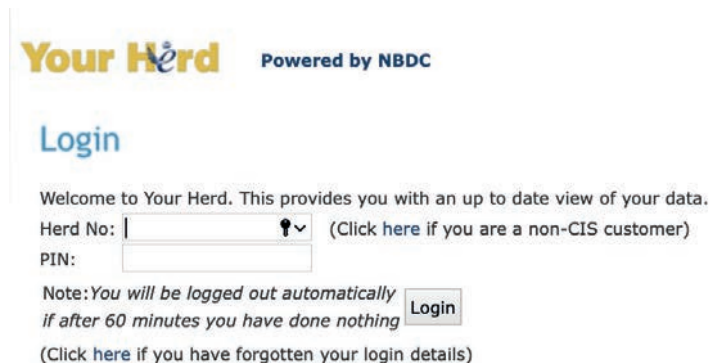

1.1 Login

All milk recording customers and their advisors can access herd data through the Herd Login on the home page of the CIS website - www.thecis.co.uk.

1.2 Member Login

When logging in as a customer, a Herd Number and PIN is required which is issued when first becoming a customer of the CIS. If any assistance is required, or if the PIN is forgotten, call 01923 695319 or contact your Area Manager.

Your Herd Powered by NBDC

Login

Welcome to Your Herd. This provides you with an up to date view of your data.

Herd No: (Click [here](#) if you are a non-CIS customer)

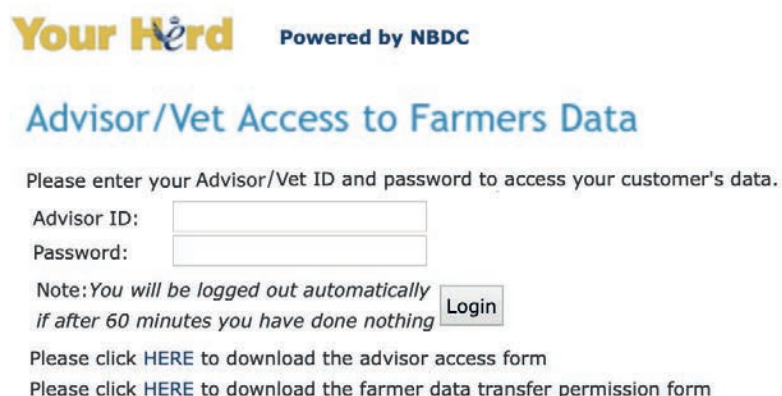

PIN:

Note: You will be logged out automatically if after 60 minutes you have done nothing

(Click [here](#) if you have forgotten your login details)

1.3 Advisor Login

Forms are available on the Login page should the customer's advisor require access, along with farmer data transfer permission forms.

Your Herd Powered by NBDC

Advisor/Vet Access to Farmers Data

Please enter your Advisor/Vet ID and password to access your customer's data.

Please click [HERE](#) to download the farmer data transfer permission form

1.4 The Main Menu

The interactive area of YourHerd is located within the Herd Management Menu. Here, users can access all management tools, including pedigree society breeding tools if applicable. When logging in to YourHerd, new customers will see the platform in its current format (Standard View). If the user wishes to use the platform in the Classic View, there is the option to do so.

The Cattle Information Service (CIS) provides the CIS web site and data entry options as part of its service to milk recording customers. This tool is intended to aid in the management of CIS dairy herds and is provided for information purposes only. While we make every effort to ensure that the information is accurate, we will not be liable for any errors, inaccuracies or delays in content or for any actions taken in reliance thereon. To the fullest extent permitted by law CIS expressly disclaims all warranties, express or implied, as to the accuracy of any content provided on, or through, the website, or as to the fitness of the information for any purpose. Nothing in this disclaimer shall be deemed to affect your rights as a consumer.

The below is a guide to the options highlighted on the menus

a Search by animal name

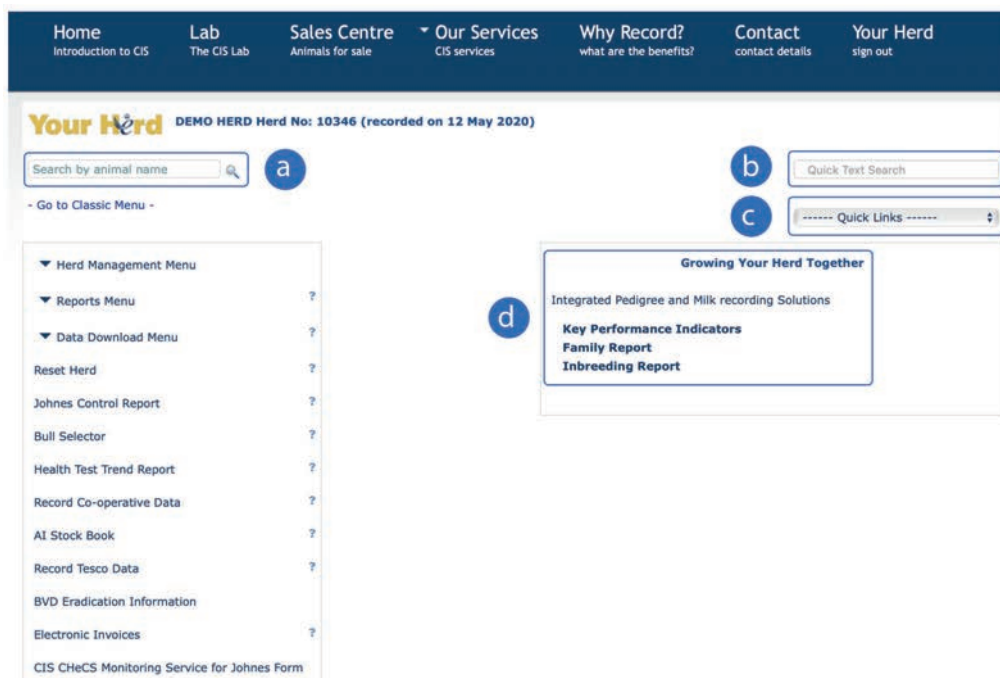

There is the option to search for individual animals by name, line number or tag number.

b Quick Text Search

The Quick Text Search can be used to find things quickly and easily by using key words. Nb. only words that are contained within a report title can be searched.

Search by Animal Name example (For further information and guidance on using these search options, go to Section 2.3.1)

The screenshot shows the 'YourHerd' website interface. A modal window titled 'Animal Search Results - 1 animal(s) found for word '0018'' is displayed. It contains a table with the following data:

Line No.	Eartag	Animal Name
0018	000000501006	DESIGN RHODA 11

Below the table, there is a cow icon and the text: 'Please click on EarTag or Animal Name for Animal related menu options'. A 'Close' button is at the bottom right of the modal.

The screenshot shows the 'YourHerd' website interface for a specific animal. The header displays 'DEMO HERD Herd No: 10346 (recorded on 16 Dec 2020)'. Below the header, there is a table with the following data:

Line No	EarTag	HBN	Current Lact	Breed	Prefix	Sex	Date Of Birth	SrCode	Status
18	000000501006	000000088291	8	01	SCOTSHILL	F	21 Jun 2011	1	A

Below the table, there are two columns of links for viewing animal details and adding/record individual animal events.

2.1.1.1 Add Calvings

This section allows users to add individual calvings of animals within the herd. The user will need to know all of the details of the calving in order to process the information. Once the details have been entered, the user will have the option to pedigree register the calf and/or request a passport. A summary is available at the bottom of each step.

The information below provides a step-by-step guide

Click on 'add calvings'

Ensure that the following data is available for entry:

- Identity of the calving animal
- Calving Date
- Calving Difficulty
- Body Condition Score *(optional)*

Click 'next step'

Enter service and sire information

Click 'next step'

Add Calvings - Step 1 - Enter calf details

2.1.1.5 Add Individual Pregnancy Diagnosis / Heat Events

This section allows users to add pregnancy diagnosis events for individual animals; if the pregnancy is positive, there is the option to select twins.

The information below provides a step-by-step guide

Click 'Add Individual Pregnancy Diagnosis Events'

Enter the identity of the animal

Select a pregnancy diagnosis from the drop down menu

- Pregnancy +ve
- Pregnancy -ve
- Barren
- Bulling
- Flushing
- Recheck
- Not to be served

Where twins are present, select the box

Enter the date the diagnosis was made

Click 'Check Data' to ensure all fields have been filled in correctly

Once complete click 'Add Events' to update YourHerd

Your Herd - Add PD/Heat Events

Line No (cow)	Or EarTag (youngstock)	Event Type	Event Twins Date

2.1.1.6 Add Batch Pregnancy Diagnosis Events

This section allows users to add pregnancy diagnosis events for a number of animals with the same PD. If the pregnancy is positive, the user can select if twins are present.

The information below provides a step-by-step guide

Click 'Add Batch Pregnancy Diagnosis Events'

Select a pregnancy diagnosis from the drop down menu

- Pregnancy +ve
- Pregnancy -ve
- Barren
- Flushing
- Recheck
- Not to be served

Enter the date the event was recorded

Click 'Step 2 - Add Animals'

Animals can be sorted by selecting the arrows by the desired headings

Select the relevant animals from the drop down menu

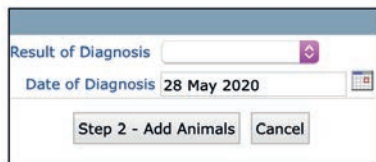

In the list of animals select the ones which match the pregnancy diagnosis

Select twins if applicable

When complete, click 'PD Selected Animals' to update YourHerd

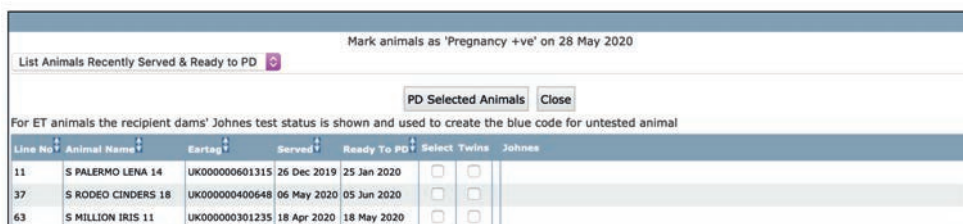

Add Batch Pregnancy Diagnosis Events - Step 1 of 2

Your Herd - Add Pregnancy Diagnosis Events step 1 of 2

Add Batch Pregnancy Diagnosis Events - Step 2 of 2

2.1.1.13 Add Health Events

This section allows users to record health events of individual animals in the herd. By recording this information, users are able to keep their records up-to-date and keep track of which animals have new and reoccurring health events.

The information below provides a step-by-step guide

- Click 'Add Health Events'
- Enter the identity of the animal
- Select a health event from the drop down menu
- Enter the date the event was recorded
- Click 'Check Data' to ensure all fields have been filled in correctly
- When complete, click 'Add Events' to update YourHerd

Add Health Events - Step 1

Your Herd - Add Health Events

Line No (cow)	Or EarTag (youngstock)	Event Type	Event Date
		Breeding Problems	
		Milk Fever	
		Mastitis	
		Feet Problems	
		Staggers	
		Acetonemia	
		Retained Placenta	
		Other	
		Metritis	
		Calf Pneumonia	
		Difficult Calving	
		Mild Ketosis	
		Calf Scour	
		Displaced Abomasum (Right)	
		Displaced Abomasum (Left)	

Health events have been saved

Add Health Events - Step 2

Your Herd - Add Health Events

Line No (cow)	Or EarTag (youngstock)	Event Type	Event Date
1667		Mild Ketosis	16-Nov-2020

Check Data Add Events Cancel

Add Health Events - Step 3

The user is able to enter eight lines of data at a time. To submit the entries, select 'Add Events'.

Your Herd - Add Health Events

Line No (cow)	Or EarTag (youngstock)	Event Type	Event Date
1667		Mild Ketosis	16 Nov 2020

(nb.. before pressing "Add Events" you can click on each cow's name to update the medical treatments)

Check Data Add Events Cancel

Add Health Events - Step 4 -

Once 'Add Events' has been selected, the entries will clear and the user will be notified that 'Health events have been saved', as indicated in the below image.

Your Herd - Add Health Events

Check Data Add Events Cancel

Health events have been saved

2.1.1.14 Record Height, Weight and Condition Score

The information below provides a step-by-step guide

- Click on 'record weights and heights'
- Enter the date that the measurements were taken
- Click on 'step 2'
 - This will initially display a list of all youngstock in the herd
 - The list can be filtered by clicking on the first downward arrow to show age ranges of youngstock
 - Clicking on the second arrow will display served and not served animals
 - The page can be viewed by 10, 20, 50 or all rows.
- Enter the weight and height for each animal. Values do not need to be entered for all animals. Some validation applies, i.e. weights must be between 50 and 2,000 kg and the height must be between 70 and 170 cm.
- Once a page of values has been entered, click 'SAVE' and go to the 'Next Page'
- If a printed copy of the set of measurements is required, select the 'All rows' option and click on the print literal on the bottom line
- If at any time previously entered measurements need to be viewed, entering the measurement date will bring up the set of data
- To view the youngstock measurement history, click on the youngstock eartag.
- This graph can be printed by clicking on the 'Print' option at the foot of the page

Record Height, Weight and Condition Score - Step 1

::Your Herd - Record Height, Weight & Condition Score step 1 of 2 - Enter the date the measurements were taken

Select an existing set of measurements

or enter the date for a new set of measurements

Select the animals scored

Select the measurements to record ☒ Height
☐ Weight
☐ Condition Score

Record Height, Weight and Condition Score - Step 2

:: Your Herd - Record Height, Weight & Condition Score Step 2 of 2

Heights and Weights measured on 16 Nov 2020

EarTag	Weight kg	Height cm	Condition Score	Age Months	Line No	Last Served
000000102248		120		17	2248	
000000202249		150		17	2249	
000000302250		160		17	2250	
000000402251		140		16	2251	
000000102255		130		16	2255	
000000302257				16	0000

2.1.1.15 Record Information for Milk Aligned Contracts

This section allows users to record and edit all data required by milk aligned contracts.

The information below provides a step-by-step guide

- Click 'Record Milk Aligned Contracts'
- Select whether data will be recorded as an existing set of measurements, or a new set
- Enter the name of the person doing the new measurements
- Select which animals are being scored
 - Milking herd
 - Youngstock
 - All animals
- Select which measurements are to be recorded
 - Mobility Score
 - Mobility Priority and Comments
 - Cleanliness
 - Condition
 - Abrasions
- To view data of an existing measurement click 'Run Report' to view data and select which report to view
- Select 'Step 2 - Record Data' to record data
- Animals can be sorted by selecting an option from the drop down option
- Enter the data to be recorded
- Mobility history can be viewed by selecting the animals ear tag
- When complete, click 'Save' and 'Run Report' to view the data

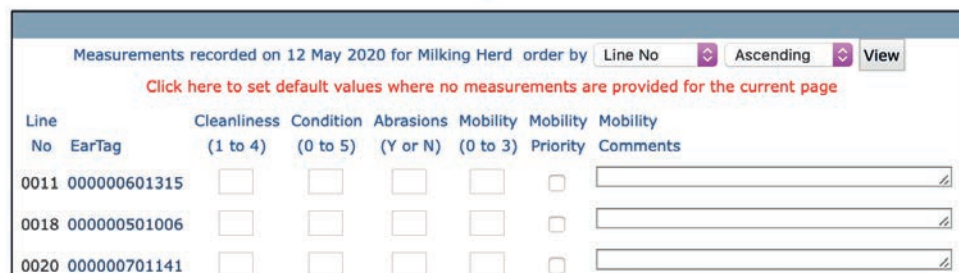

Your Herd - Tesco Data step 1 of 2 - Enter measurement date

TOP TIP

To avoid time out, save after every 25 entries.

Your Herd - Record Tesco Data step 2 of 2 - Enter Measurements

TOP TIP

Select the red text to set default values. The values can then be amended for certain animals.

2.1.1.16 Assign Youngstock Line Numbers

This section allows users to assign all youngstock to a line number within YourHerd.

The information below provides a step-by-step guide

- Select how the list of youngstock should be sorted
- Select how many rows are to be viewed on each page
 - 20 rows per page
 - 50 rows per page
 - 100 rows per page
 - All rows
- Enter the line number of the animals that are blank or edit where necessary
- When complete, click 'Save' to update YourHerd before moving to the next page

Your Herd - Assign Youngstock LineNo's

Sort Youngstock by (and optionally limit list to eartags containing)

EarTag	Line No.
000000101954	<input type="text" value="1954"/>
000000102052	<input type="text" value="2052"/>
000000102066	<input type="text" value="2066"/>

2.1.1.17 Register Calves / Request Passports

This section allows users to register calves and/or request passports of the recently calved animals from their herd if this was missed in the 'Add Calving' section, or if the Recorder adds a calving event via the Milk Recording program.

The information below provides a step-by-step guide

- Click 'Register Calves/Request Passports'
- Select the relevant animals to view from the drop down menu
 - Calved in the last 7 days
 - Calved in the last 14 days
 - Calved in the last 28 days
 - Calved in the last 40 days
 - Calved in the last 45 days
- Click 'Add Calf/Pedigree/Passport' of the relevant animal
- Tick the relevant boxes for the relevant information
- Click 'Next Step' and then 'Save' to update 'YourHerd' and send for information
- Once completed the relevant animals can be viewed in the 'Register Calves/Request Passport'
 - A yellow tick indicates accepted requests
 - A red tick indicates suspended requests - *Animals in suspense can be viewed by selecting them*
 - A red cross indicates no requests

Your Herd - Register Calves / Request Passports

Calved in the last 45 days

List Calves

2.1.2 Medicine Book

The Medicine Book allows users to add and maintain medical conditions and treatments within their herd. The Medicine Book is designed to meet legislation and the data entered becomes a management tool.

Set Up

This section of the Medicine Book allows users to:

- Add and edit suppliers of drugs and routine medicines
- Add and edit all suppliers of medical treatments which can then be selected when adding treatments in other sections
- Add and edit all medicines that are used on the herd to aid with quick recordings of medicines in other sections
- Add and maintain treatments and conditions that occur within the herd to aid with quick recordings for reasons of treatments in other sections

Drug Administration

This section of the medicine book allows users to:

- Add and edit treatments of individual animals. Once the animal's identity has been entered, treatments and conditions that were added in the 'Set Up' section can be selected
 - Treatment history can be viewed
 - When treatments are added ensure that a new treatment or a continuation of treatment is specified
- Add and edit batch treatments to animals that have had the same treatments. Animals can either be added in group bulk or a number of animals can be individually selected
- View actions and outstanding tasks that need updating. These issues arise when the 'prompt date' entered in the 'Add/Update Treatments' has been reached

Reports/Prints

This section of the medicine book allows users to:

- View the reports for Milk/Meat Withdrawal Period and Medicine Purchases. Within the section, three different reports can be selected:
 - Medicine Withdrawal Report
 - Parlour Sheets
 - Medicines Purchased

View the history of treatments within your herd. These can be sorted by reason and/or date and also by animal ID, date treated and medicines used.

2.1.2.1 Medicine Book - Setup

Your Herd - Medicine Book

<u>Setup</u>	<u>Drug & Treatment Administration</u>	<u>Reports/Prints</u>

2.1.2.1.2 Setup - Add/Maintain Medicines

This page enables users to enter the details of medicines into the Medicine Book. Only medicines approved by DEFRA can be pre-selected.

- Type the name of the medicine to match it to the one in the list - please ensure that the full name of the medicine is used
- In the event that a medicine supplied is not on the list, it is important that a VM Number is provided - if this information is not available, please ensure that all known information and any other information available are explained in the notes section.

If you have a milk aligned contract, it is essential that you treat animals with medicines on the DEFRA approved medicine list.

Top Tip

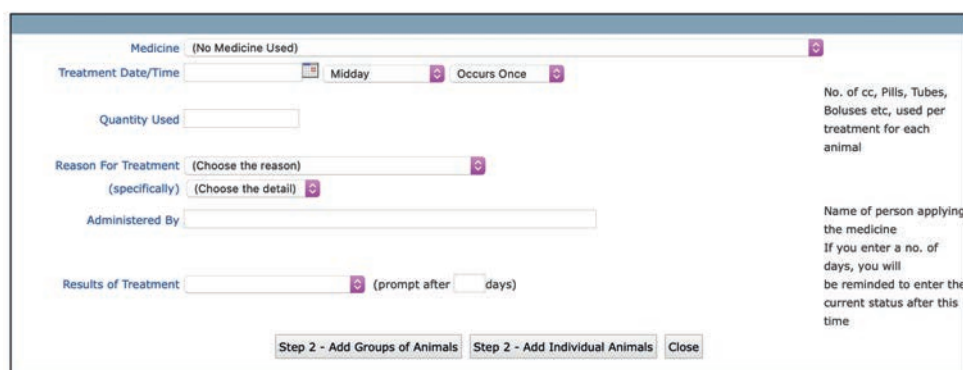

If a treatment is a one off treatment select Animal Clear or Not Applicable to avoid further action. If an option is not selected from the list, the treatment will still appear on the View Actions / Outstanding Tasks page that you automatically see when you log into the Medicine Book.

2.1.2.2.3 Drug & Treatment Administrations - Add Batch Treatments

Step 1 of 2

- Select medicine administered
- Time and date administered
- Quantity used is how much you have given the individual animal not total amount used
- Select the reason for treatment (this page is usually used for batch vaccinations)
- Select who has administered the drugs
- If the Results of Treatment box is selected, there needs to be a follow up after so many days. Alternatively select Not Applicable and no prompt will be generated

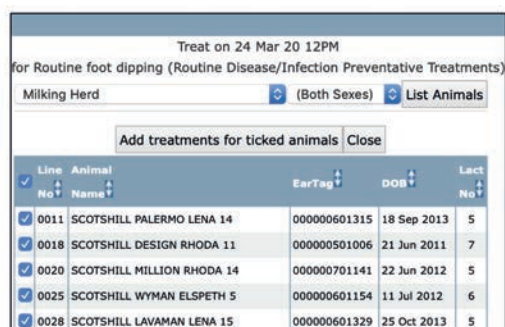

Your Herd - Add Batch Treatments step 1 of 2 - Define the Treatment

Step 2 of 2

- Select from the drop down options which group of animals you wish to treat
- Select by ticking the box beside the animal identification
- You can either select individual from the list or if you tick the box in the heading column it will select all animals in the chosen list
- Select Add Treatments for ticked animals once the correct animals have been selected

Your Herd - Add Batch Treatments step 2 of 2 - choose the animals to be treated

2.1.2.2.4 Drug & Treatment Administrations - View actions/outstanding tasks

All treated animals appear on the due list when they require further attention.

If the animal doesn't require any further treatment, they can be marked as clear, or the reminder can be reset.

Your Herd - View Actions/Outstanding Tasks

The following tasks are due, click on an individual action to complete the task

Choose Action	Animal ID.	Reason for Treatment	Task	Date Task Due
- Edit Treatment - Flag Animal as Clear	SCOTSHILL PALERMO LENA 14 LineNo=0011 HBN=01/521595	No visible Oestrus	Log results after 7 days	Sun 17 Nov 19 12PM
- Edit Treatment - Flag Animal as Clear	SCOTSHILL DESIGN RHODA 11 LineNo=0018 HBN=01/88291	Lame (Front Left)	Log results after 7 days	Mon 23 Mar 20 12PM

2.1.3 Production Planner

The *Production Planner Graph* is pre-populated with the previous twelve month's data information and fertility data to ascertain the number of cows in the herd each month and their daily yield. As the data is pre-populated, the user must ensure that everything is correct before proceeding, if not, amends can be made. The user can also tailor the *Production Planner* if herd changes are planned for the future, such as buying or selling cows.

Your Herd - Production Planner Step 1 - Identify changes in the herd size over the next 12 months

	Apr 2020	May 2020	Jun 2020	Jul 2020	Aug 2020	Sep 2020	Oct 2020	Nov 2020	Dec 2020	Jan 2021	Feb 2021	Mar 2021	
Identify any changes in the size of the milking herd over the next 12 months													
Cows Left Herd	0	0	0	0	0	0	0	1	0	0	0	0	
New Heifers	4	0	1	1	8	6	5	8	0	6	6	0	
Cows Bought In	0	0	0	3	0	0	0	0	0	0	0	0	
Identify the No. of Litres per day taken out for :-													
Domestic Usage	3	3	3	3	3	3	3	3	3	3	3	3	
Processing on Farm	0	0	0	0	0	0	0	0	0	0	0	0	
Days Discarded	4	No. of days after calving before you start putting the cow's milk in the bulk tank											
Use PD Status	<input checked="" type="checkbox"/>	If ticked the first 6 months New Heifers will be calculated from YS currently marked as PP											
Step 2 - Calculate the Forecast Production													

The report below will then show the user any changes in milk profile based on cows entering and leaving the herd to assist with understanding the milk profile throughout the year.

2.1.4 Animals For Sale

Users can mark whole herds or individual cows for sale; these animals will then automatically appear on the CIS website.

- The animals that are to be made available for sale can be filtered according to Animal group, PD status, lactation, and date of birth range.
- Comments are optional and four lines of text can be added to provide further information.
- Contact is a mandatory field where the contact name and phone number or email address must be supplied.
- Select animals for sale by clicking in the For Sale box beside each animal.
- Rows can be sorted by clicking on the arrows beside each column title.
- Once complete, click on Save Changes.
- A report of any selected animals can be viewed by clicking on the link at the bottom of the screen.

 - Herd Genetic Report ?

2.1.5.1 Request individual animal genomic tests

Users can request an individual genomic test for any pure-bred female animal in their herd. Please note that in the UK, genomic evaluations are currently only available for the Holstein, Friesian, Jersey and Ayrshire breeds and male genomic tests must be requested through the relevant Breed Society. A2, Brachy Spina, Coat Colour, Polled, Cholesterol Deficit (Chol Def) and Complex Vertebral Malformation (CVM) test can also be requested alongside the genomic test for an additional cost.

- From the drop down list in the column marked 'Select New Test' displayed in the grid below, select the HD GPLI (UK) test and click on the button 'Request Test' in the last column.
- Diagnostic tests can be requested at the same time by selecting the required check box.
- After the desired animals are selected, click on 'Process Order' to save the order.

Your Herd - Request Genomic test

2.1.5.2 Track genomic tests

This page can be used to track genomic tests from requesting the test to receiving the results. All tests requested through UK Breed Societies/CIS/NBDC will be shown on this page.

Once the results have been analysed, users will be able to view the genomic proof by clicking on the animal name to view a Complete Cow Card / Fact sheet. The data will also feed into the Herd Genetic Report; animals with a genomic component in their evaluation are identifiable by the green G symbol. Within the Herd Genetic Report, the user will have access to information for their whole herd, along with the ability to view only Youngstock or the Milking Herd.

Your Herd - Genomic Test Request History

Both Sexes

Line No	Sex	Animal Name	EarTag	Genomic Test	Coat Colour	A2	Polled	Brachy spina	CVM	Chol Def	Requested	Genomic indexes available	Track Request

2.1.5.3 Forward order genomic tests

Users are able to forward order genomic tests resulting in a discount, dependent upon the quantity ordered. Genomic tests can be forward ordered in multiples of 10 and the cost can be split over several months if required. Discounts are available for orders of 50 or more tests:

- 50-99 tests, 2.5% discount
- 100-199 tests, 5% discount
- 200+ tests, 10% discount

Users may request a genomic test for any pure-bred female Holstein, Friesian, Jersey or Ayrshire animals. All tests from non milk recording herds will occur a slight additional charge.

Use the options to choose the number of tests you wish to forward buy and then click the 'Process Order' button to complete the purchase.

Users will receive an email from genomics@thecis.co.uk to confirm the purchase. Once requested, the testing kit will be posted and will comprise of instructions and the resources needed to submit a test by either hair or tissue sample.

The user must assign the animal's identity on *YourHerd* through the 'Assign Animals to Genomic Tests' menu page so that tests can be processed quickly and efficiently. **This must be done prior to sending the samples back.**

2.2 Herd Health Reports and Analysis

The images below display the options available within the Herd Health Reports and Analysis menu.

Classic View

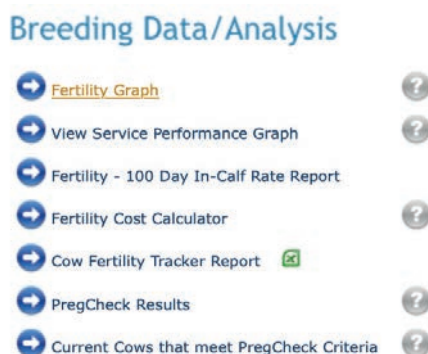

Standard View

2.2.1 Breeding Data/Analysis

The images below display the options available within the Breeding/Data Analysis Menu.

Classic View

Standard View

2.2.1.1 Fertility Graph

The Fertility Graph displays the fertility status of the whole herd during their current lactation. At a glance, users can pin point problem cows and assess the whole herd. Animals are plotted by the days in milk and colour coded to fertility status, users can drill down to see individual cow detail by clicking on any of the dots.

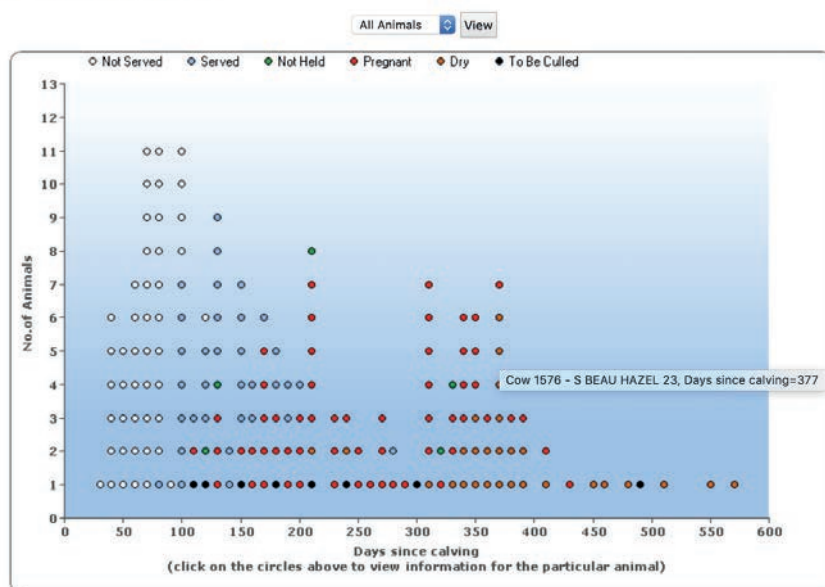

In addition to seeing All Animals, the graph can be narrowed down to First Calvers and Cows.

Each circle on the screen represents one animal in your herd, in their current lactation.

To see basic information about an animal (Name, Line No), simply hover over the circle.

To see all of the animals that fall into a specific 'Days Since Calving' column, select the 'Days Since Calving' value.

Your Herd - Fertility Graph

TOP TIP

Click on the individual circles to view information about individual animals

2.2.1.2 Service Performance Graph

The Service Performance graph displays the conception rate of your herd.

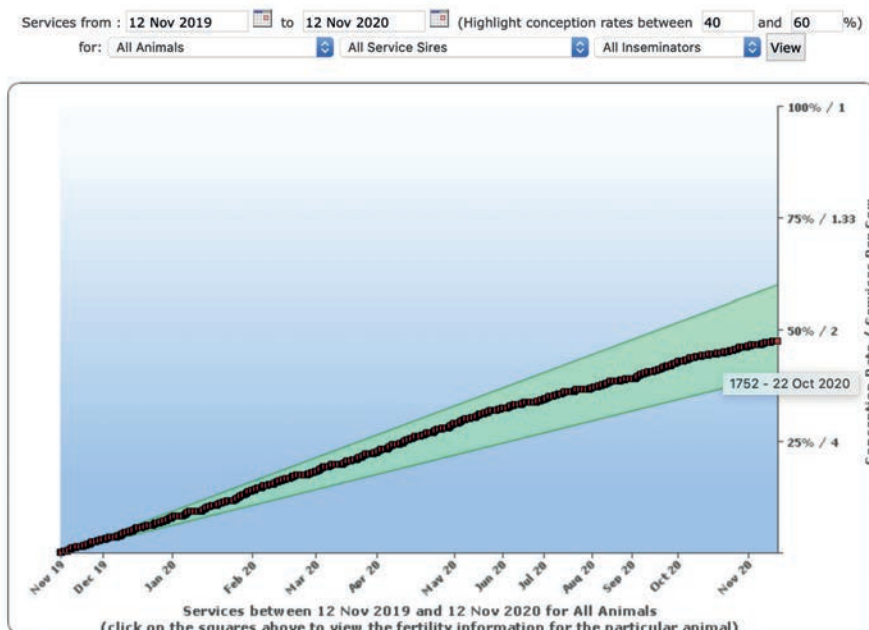

- Each square displayed on the graph represents one service in the herd; if the service holds then the square will be moved up and right; if the service does not hold, then the square will be moved to the right, but not upwards.
- The steeper the line of the graph, the better the conception rate.
- To view basic information about an animal, hover over the square.
- To see an overview of each animal, click on the square.
- To see all the animals that fall into a specific Days Calved column, select the Days Calved value.

Drop down box filters:

- All Animals - All animals including dead/sold animals
- Alive Animals - Current alive animals' services
- Alive Animals not Barren/NTBS - Current alive animals' excluding those barren or not to be served
- Alive Cows - Current alive second plus calvers
- Alive First Calvers - Current alive first calvers
- Alive Youngstock - Current alive youngstock

You also have the ability to analyse individual service sires and inseminators.

Your Herd - Service Performance Graph

TOP TIP

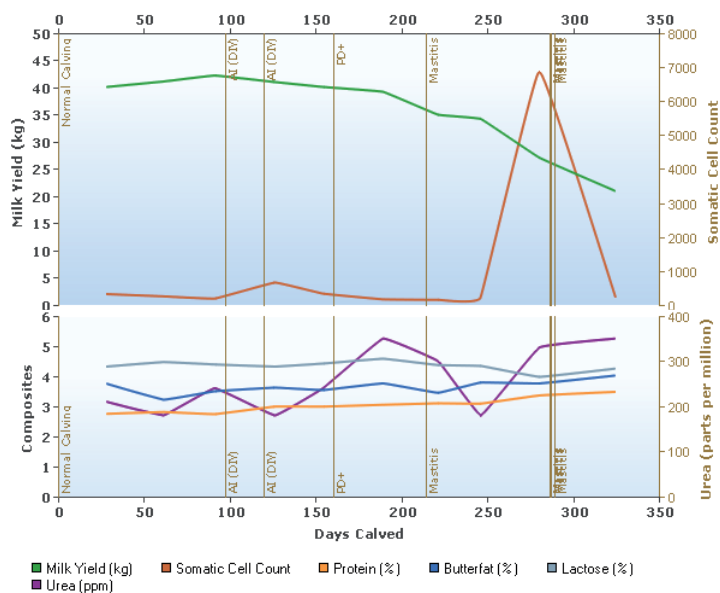

Click on the individual squares to view information about individual animals

Cow Overview

The Cow Overview can be accessed through different reports in YourHerd.

2.2.1.3 Fertility - 100 Day in Calf Rate

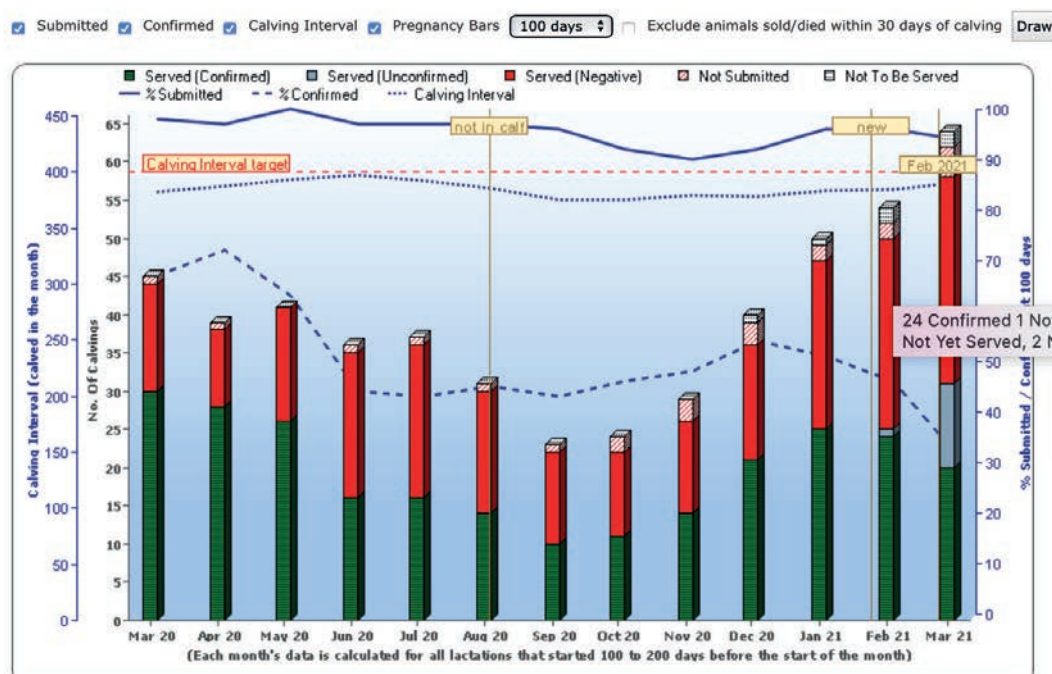

This graph displays, on a month to month basis, all animals which have been:

- Served and confirmed as being in calf
- Served but not yet confirmed as being in calf
- Served but negative
- Animals eligible to be served but have not been submitted
- Animals not to be served

The graph can be set from 45 days to 200 days and can exclude animals which have been sold or died within 30 days of calving. Target calving intervals can be edited in the 'Health Wall Planner Targets'.

Displays monthly averages for percentage of submitted/confirmed animals and calving interval along with the rolling averages for all three parameters.

- A graph to show your in calf rate with the ability to select from 45 days from the dropdown box
- The user can select which information is displayed by selecting the tick boxes at the top of the graph
- Hover over the bars within the chart to provide a breakdown of the data within it
- The table below displays 12 months data of rolling data

Month	Served (Confirmed)	Served (Unconfirmed)	Served (Negative)	Not Submitted	No To Be Served	Calving Interval	No Cows In Herd
01 Mar 2020	30	0	14	1	0	376	179
01 Apr 2020	28	0	10	1	0	381	179
01 May 2020	26	0	15	0	0	387	176
01 Jun 2020	16	0	19	1	0	391	174
01 Jul 2020	16	0	20	1	0	386	172
01 Aug 2020	14	0	16	1	0	379	170
01 Sep 2020	10	0	12	1	0	369	176
01 Oct 2020	11	0	11	2	0	369	177
01 Nov 2020	14	0	12	3	0	373	175
01 Dec 2020	21	0	15	3	1	372	178
01 Jan 2021	25	0	22	2	1	377	181

01 Mar 2021	20	11	27	4	2	384	177

2.2.1.4 Fertility Cost Calculator

The Fertility Cost Calculator allows users to view relative cost effects of the calving interval within the herd.

Choose the groups of cows to analyse

By unticking the animals with a high projected calving interval you can see the effects this will have on your herd.

Click 'Analyse Contribution' to see the effect on the overall fertility costs

The user may serve or add a PD then click 'Analyse Contribution' to view the changed cost effect.

A cow's fertility value is calculated as the 'cost per cow per day x the difference between the projected calving interval and your target calving interval'

If groups of animals are included which have Not Held to Service, the analysis is performed assuming they are served today (and this service will hold)

Nb. Users can change the cost per cow per day and target calving interval to values appropriate for their herd.

Your Herd - Fertility Cost Calculator

Choose cows to analyse (179 in Herd)

☒ 111 Confirmed Pregnant
☐ 3 Unconfirmed Pregnant
☐ 22 Freshly Served (Not Held to Service)
☐ 37 If served today will calve within target CI
☐ 2 If served today will calve outside target CI
☐ 4 Not to be Served

£ 3.00 cost per cow per day
 390 target calving interval

Average Calving Interval for 111 cows in analysed groups = 381.3 c
 Average Calving Interval for 111 selected cows = 381.3 c
 Total Fertility Value=£2,904, Saving=£0

For ET animals the recipient dams' Johns test status is shown and used to create the blue code for untested animal

Page 1 of 6

Green *LOW RISK - non-infectious, potentially non-infected (old cows tend to be 'safer' than young cows) candidates for the colostrum bank

Yellow *HIGH RISK - Require high standards of hygiene around calving. No colostrum/milk used for calves

Red *HIGH RISK - Potentially to be culled prior to the next calving and not allowed near the calving area. No colostrum/milk used for calves

Blue *Animal was born out of a High Risk cow

*CIS recommend you consult your vet for advice on possible further confirmation tests and an infected cow/herd management policy

2.2.1.5 Cow Fertility Tracker Report

The Cow Fertility Tracker Report can be accessed as both a PDF document and an Excel spreadsheet. This report will show all of the calvings, services, pregnancy diagnosis and abortions for the current lactation, provided the data has been entered into the system.

2.2.3.1 Urea Graph

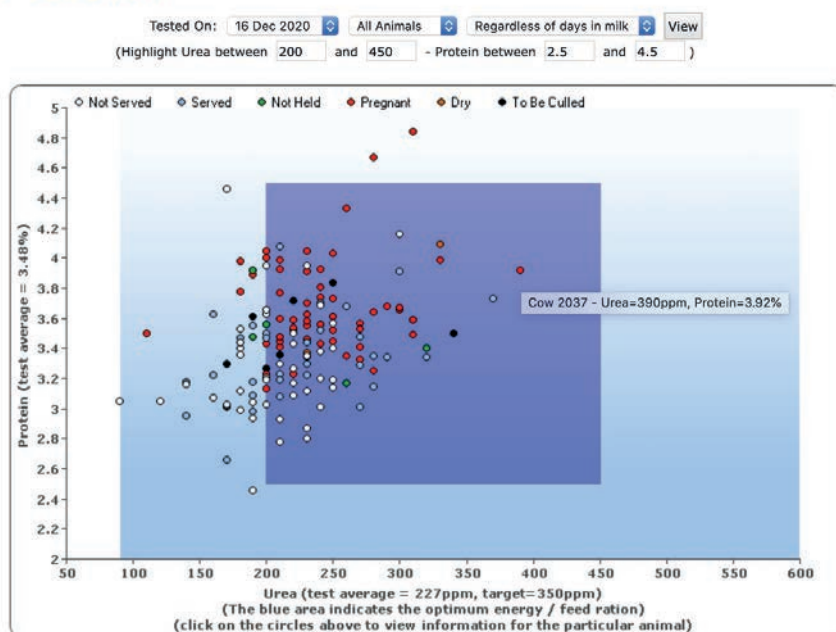

The Urea Graph displays the results of urea tested within the herd. From the drop down menu at the top of the page, select which date you wish to view. Users can also select which group of animals they would like to see.

The blue area indicates the optimum energy / feed ration.

Each point on the graph represents one animal in the herd. By hovering over the point, the user is able to see the Cow Number, Urea (ppm - parts per million) and percentage of Protein.

To view a cow in more detail, select a point and the Cow Overview will then be displayed.

Your Herd - Urea Graph

TOP TIP

2.2.3.3 Urea Trend Graph

The Urea Trend Graph displays the results of urea tested within the herd as a trend. From the drop down menu at the top of the page, select which animals you wish to view.

Each point on the graph represents the date a urea test was completed and shows the average value in the herd at that date. By hovering over the point, the Urea ppm can be viewed, along with the date the test was recorded and the number of animals tested.

Your Herd - Urea Trend Graph

2.2.3.4 Urea Trend Report

The Urea Trend Report displays the rolling urea analysis for the last twelve tests.

The report is divided into three sections depending on which lactations the user wishes to view:

- All lactations
- 1st Lactation
- 2+ Lactations

The report is then subdivided into five sections depending on how many days calved the user wishes to view:

- All Days Calved
- 0-60 Days Calved
- 61-120 Days Calved
- 121-200 Days Calved
- 200+ Days Calved

The results are displayed by test date and then by the number of cows tested in that lactation and the average urea ppm.

2.2.4 HerdCare Graph

The CIS Disease Health Schemes are for users who wish to improve or monitor the health and profitability of their herd through bulk milk sampling. The schemes are run in conjunction with Biobest.

Option 1 - Herd Disease Status

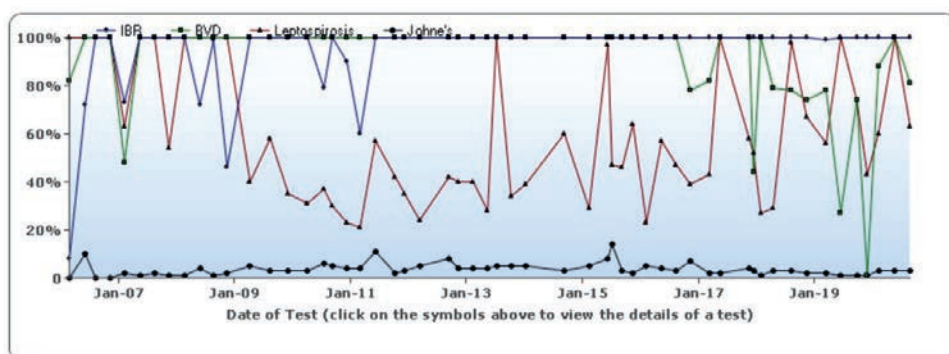

- Four consecutive monthly bulk tank samples
- Tested for BVD, IBR, Lepto and Johne's
- On completion of the four tests, details are available at www.thecis.co.uk with Biobest veterinary comments

Option 2 - Herd Disease Monitoring

- Quarterly bulk tank tests
- Tested for BVD, IBR, Lepto and Johne's
- After each quarterly test, details are available at www.thecis.co.uk with Biobest veterinary comments
- The continued service allows the user to be the first to know if your herd's health status changes
- Using this service enters the herd into the CHECS Approved Monitoring Scheme.

Online version

Your Herd - HerdCare Graph

[\(Click here for printable version of this report\)](#)

Details of the test performed on 28 Aug 2020, IBR=100%, BVD=81%, Leptospirosis=63%, Johne's=3%

IBR: Titres >60 indicate a heavily infected or vaccinated herd. If you are not vaccinating and would like to know more about investigation and control of IBR please contact us.

BVD: Titres 21-90 suggest a proportion of the herd has been vaccinated or infected. To investigate whether infection is currently active, 10 unvaccinated homebred replacements in the 9-18 month age range can be tested. If you would like to discuss this please contact us.

Leptospirosis: Titres >50 indicate a proportion of infected or vaccinated animals in the herd. If you are not vaccinating and would like to discuss the investigation and control of leptospirosis please contact us

Johne's: Titres <11 suggest the herd may not have a high prevalence of infected cows and could be in a position to progress to CHECS Risk Level 1 through appropriate testing and management. If you would like further information please contact us.

Overall Comments:

IBR: Titres >60 indicate a heavily infected or vaccinated herd. If you are not vaccinating and would like to know more about investigation and control of IBR please contact us.

BVD: Titres 21-90 suggest a proportion of the herd has been vaccinated or infected. To investigate whether infection is currently active, 10 unvaccinated homebred replacements in the 9-18 month age range can be tested. If you would like to discuss this please contact us.

Leptospirosis: Titres >50 indicate a proportion of infected or vaccinated animals in the herd. If you are not vaccinating and would like to discuss the investigation and control of leptospirosis please contact us

Johne's: Titres <11 suggest the herd may not have a high prevalence of infected cows and could be in a position to progress to CHcS Risk Level 1 through appropriate testing and management. If you would like further information please contact us.

2.2.5 Health Wall Planner

The images below display the options available within the Herd Health Reports and Analysis menu.

- Cows in Herd is defined as the number of cows in the herd at the milk recording nearest to the 15th of the month
- Clinical cases are defined as the count of treatment records from the Medicine Book where treatments are not marked as a continuation of an existing treatment
- Only one rolling mean is shown on any graph at a time. To view rolling means, select the option e.g. calf scours and the rolling mean check box, then select Draw.

2.2.5.5 Fertility - 100 Day In Calf Rate Report

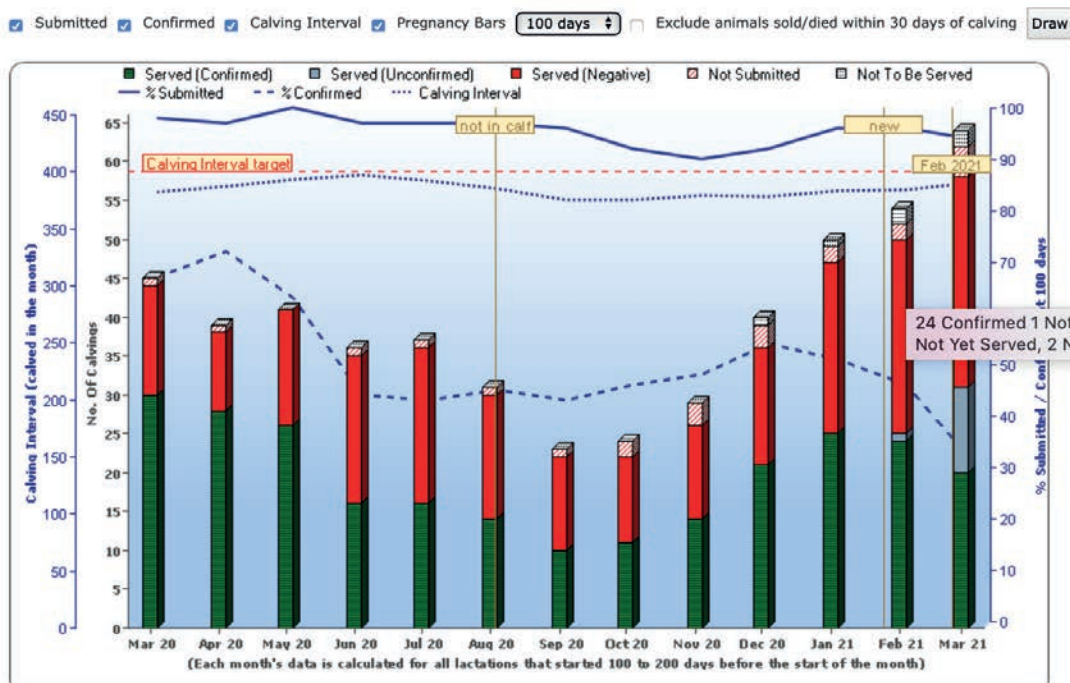

This graph displays, on a month to month basis, all animals which have been:

- Served and confirmed as being in calf
- Served but not yet confirmed as being in calf
- Served but negative
- Animals eligible to be served but have not been submitted
- Animals not to be served

The graph can be set from 45 days to 200 days and can exclude animals which have been sold or died within 30 days of calving. Target calving intervals can be edited in the 'Health Wall Planner Targets'.

Displays monthly averages for percentage of submitted/confirmed animals and calving interval along with the rolling averages for all three parameters.

- A graph to show your in calf rate with the ability to select from 45 days from the dropdown box
- The user can select which information is displayed by selecting the tick boxes at the top of the graph
- Hover over the bars within the chart to provide a breakdown of the data within it
- The table below displays 12 months data of rolling data

2.2.6 Ketosis & Acidosis Graph

The imbalance of butterfat and protein levels in milk is an early indicator of an imbalance in the feed regime. Graphical illustrations of lactating cows display the ratio of butterfat and protein at the last milk test.

The Ketosis & Acidosis Graph displays the fat and protein ratios of cows within the herd and their susceptibility with the risks of ketosis and acidosis.

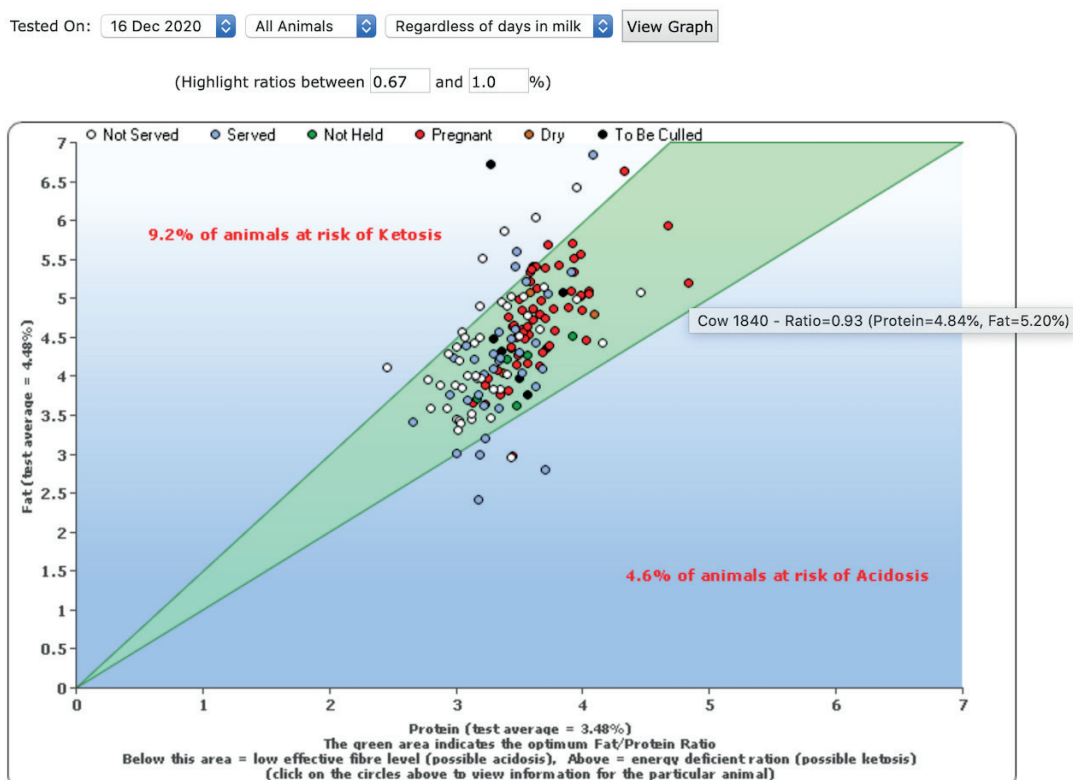

Each circle on the graph represents one animal in the herd. By hovering over a circle, the user can identify the individual Cow Number, Fat:Protein Ratio, Fat % and Protein %.

To view more information from an animal, select a circle which will take direct the user to the 'Cow Overview'.

The area highlighted in green indicates the optimum Protein:Fat Ratio. The ratios can be edited by entering different values at the top of the graph and selecting 'View Graph'.

To view a different lactation of animals and test dates, edit the options at the top of the page and click 'View Graph' to update it.

Below the graph is a table of all of the animals in your selection. The animals are sorted by highest to lowest risks of possible ketosis and acidosis. To view more information of each animal, select the ear tag number which will take you to the 'Cow Overview'.

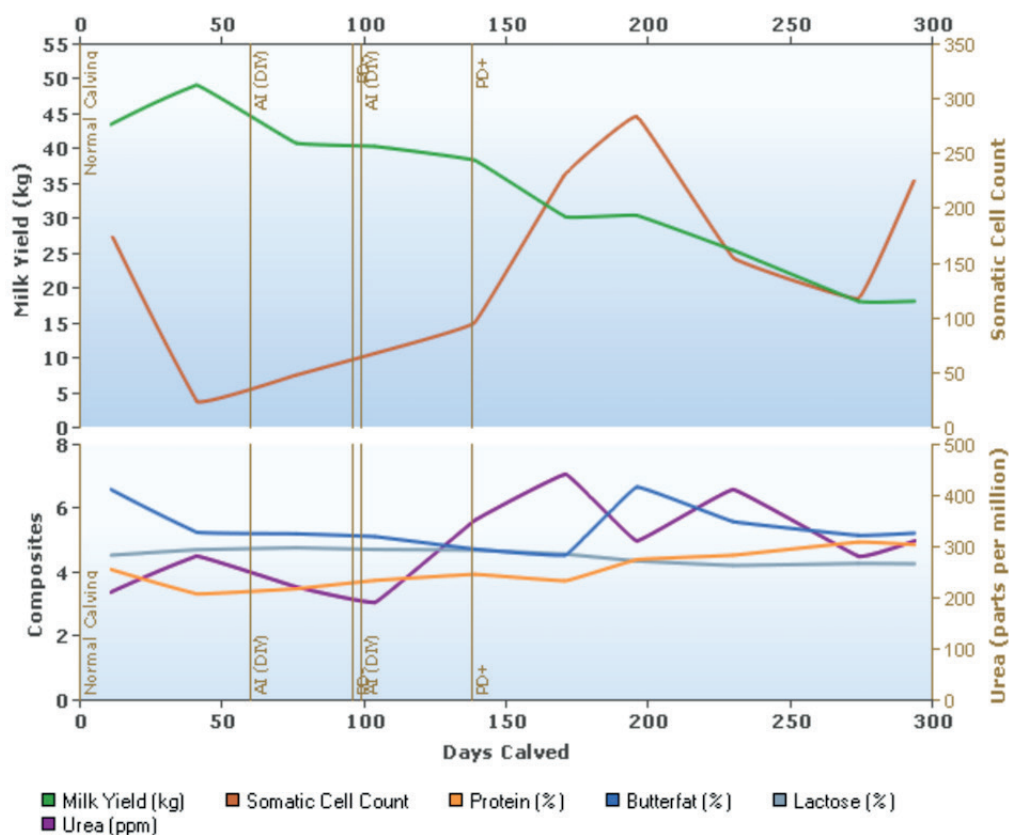

Line No	EarTag	Lact No.	Calved	Ratio	Yield kg	Protein %	Fat %

2.2.7 Production Versus Protein

This section allows the user to view a Protein Intercept Graph and a Protein Intercept Trend Graph.

2.2.7.1 Protein Intercept Graph

The user can choose to view any recording for the herd.

Each point on the chart represents an animal at the recording.

The green line is the linear regression representing the relationship between milk yield and protein % at the recording. The red line is fixed at 3.2% protein, where these two lines cross is called the 'Protein 3.2% Intercept'.

The 3.2% Protein Intercept is at the point of KG milk per cow that can be sustained by the diet, maintaining 3.2% protein in the milk.

Line No	EarTag	Lact No.	Calved	Ratio	Yield kg	Protein %	Fat %		
1752	000000201752	3	22 Aug 2020	1.32	38.10	3.70	2.80	Possible Acidosis	*****

1945	000000601945	2	06 Dec 2020	0.60	26.50	3.63	6.04	Possible Ketosis	*
1940	000000101940	2	10 Oct 2020	1.06	48.20	3.19	3.00	Possible Acidosis	*

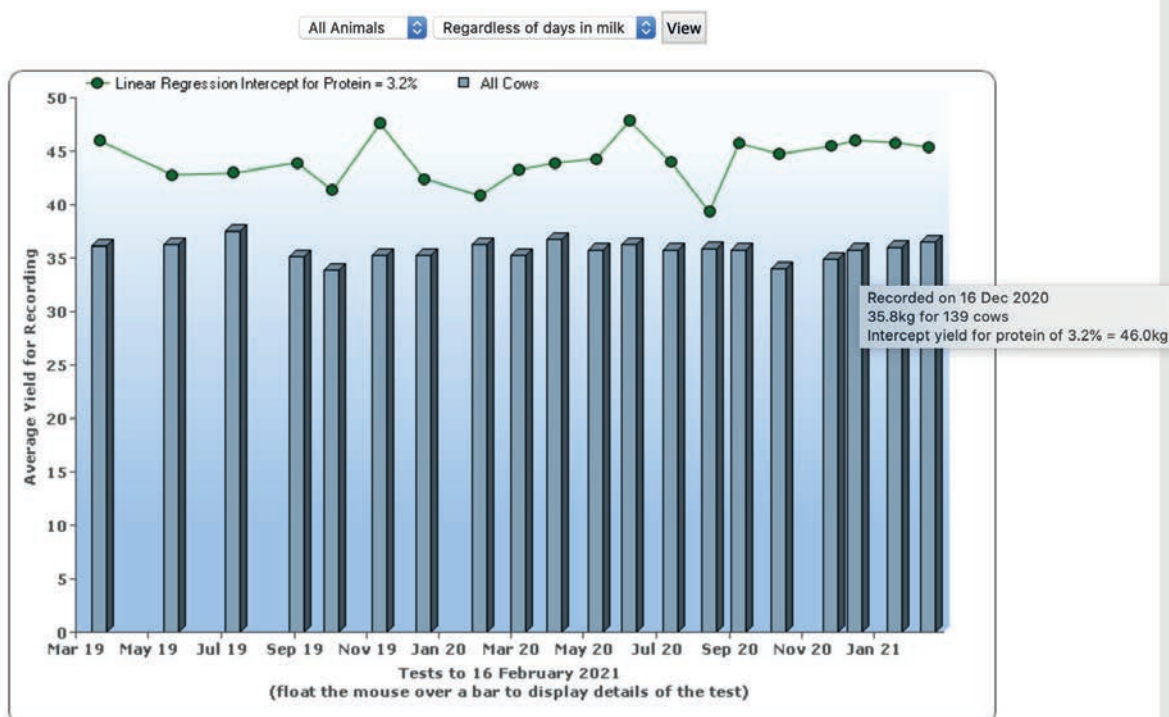

2.2.7.2 Protein Intercept Trend Graph

The graph shows all recordings for the herd with each bar showing the average milk yield at the recording. By hovering over the individual bars, the milk yields at the recording and the milk kg where protein % is at 3.2% will be displayed; in both cases the number of cows represented is also shown.

Each dot on the chart represents the Protein 3.2% Intercept KG milk value at that recording. The 3.2% Protein Intercept is at the point of KG milk per cow that can be sustained by the diet, maintaining 3.2% protein in the milk. The line between dots indicates the maximum yield that animals achieve at the recording where the protein does not fall below 3.2%.

If the cow has a higher yield it will tend to have lower protein, perhaps indicating a feed problem.

2.2.8.1 SCC Analysis - Current Lactation

The SCC Analysis Current Lactation section allows the user to list the herd in terms of their cell count group during the current lactation.

When animals are tested for SCC, they are grouped in the following ways:

- First Test Problem
- New Problem
- Ongoing Problem
- Repeat Problem
- Recovered
- Uninfected

This table can be used to sort and view the herd by selecting which group to view and in which order. Individual animals can also be seen in more detail by selecting 'View' in the 'Details column'.

2.2.8.2 SCC Analysis - Trend Graph

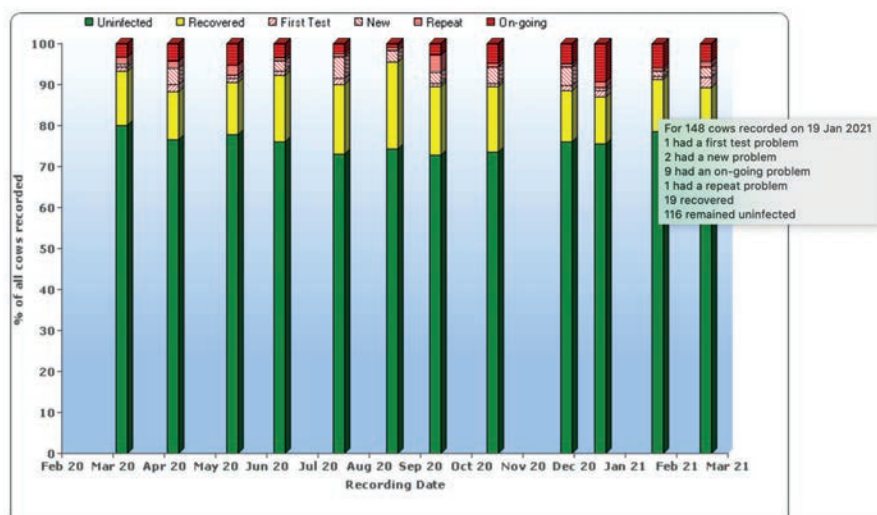

This graph shows the trends of the SCC within the herd as a percentage of cows recorded during the current lactation.

Each bar is divided by a different colour which represents the following groups:

- Uninfected
- Recovered
- First Test
- Repeat
- Ongoing

By hovering over each bar, the user can see how many cows are affected in each group at the time of recording.

Your Herd - SCC Analysis - Current Lactation Trend Graph

2.2.8.3 SCC Analysis - Dry Period

This section allows users to list the herd in terms of their cell count group during the dry period.

When animals are tested for SCC, they are grouped in the following ways:

- Remained Healthy
- Dry Period Recovery
- Dry Period Rise
- Remained High

This table can be used to sort and view the herd by selecting which group to view and in which order. Individual animals can also be seen in more detail by selecting 'View' in the 'Details' column.

2.2.8.4 SCC Analysis - Dry Period Trend Graph

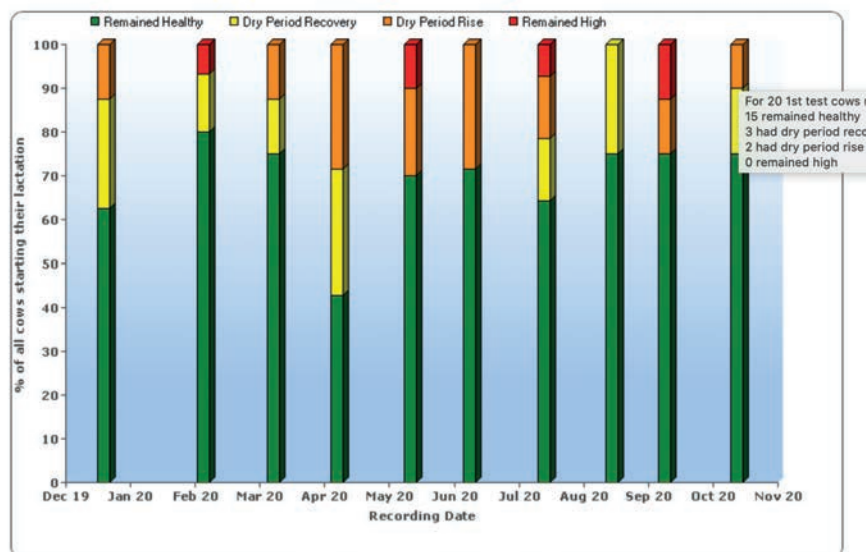

This graph displays the trends of the SCC within the herd as a percentage of cows recorded during the dry period.

Each bar is divided by a different colour which represents the following groups:

- Remained Healthy
- Dry Period Recovery
- Dry Period Rise
- Remained High

By hovering over each bar, the user can to see how many cows are affected in each group at the time of recording.

Your Herd - SCC Analysis - Dry Period Trend Graph

(Click here for printable version of this report)

2.2.8.5 Fat/Protein Monitor

This section allows users to list the herd in terms of their milk fat and protein composition.

When an animal's milk is tested for fat and protein, they are grouped in the following ways:

- Suspected Ketosis
- Suspected Acidosis
- Low Fat
- Low Protein
- High First Test Fat

This table can be used to sort and view the herd by selecting which group to view and in which order. Individual animals can also be seen in more detail by selecting 'View' in the 'Details column'.

TOP TIP

At the top of each column, the blue arrows can be clicked to view the report by different ascending/descending factors

2.2.8.6 Production Monitor

This section allows users to list the herd in terms of their production.

When an animal's milk is tested, the amount of milk produced is recorded and they are then grouped in the following ways:

- Drop in Milk Yield
- Increase in Milk Yield

This table can be used to sort and view the herd by selecting which group to view and in which order. Individual animals can also be seen in more detail by selecting 'View' in the 'Details column'.

▲ Herd Health Reports and Analysis

▼ Breeding Data/Analysis

▼ Urea Data/Analysis

2.2.9.1 Average Mobility/Yield Graph

The Average Mobility/Yield Graph displays the mobility status of your whole herd compared to the milk yield produced. The graph can be sorted by measured date, parity and days in milk by selecting which animals you wish to view from the drop down menu. Select 'Draw' to update the graph.

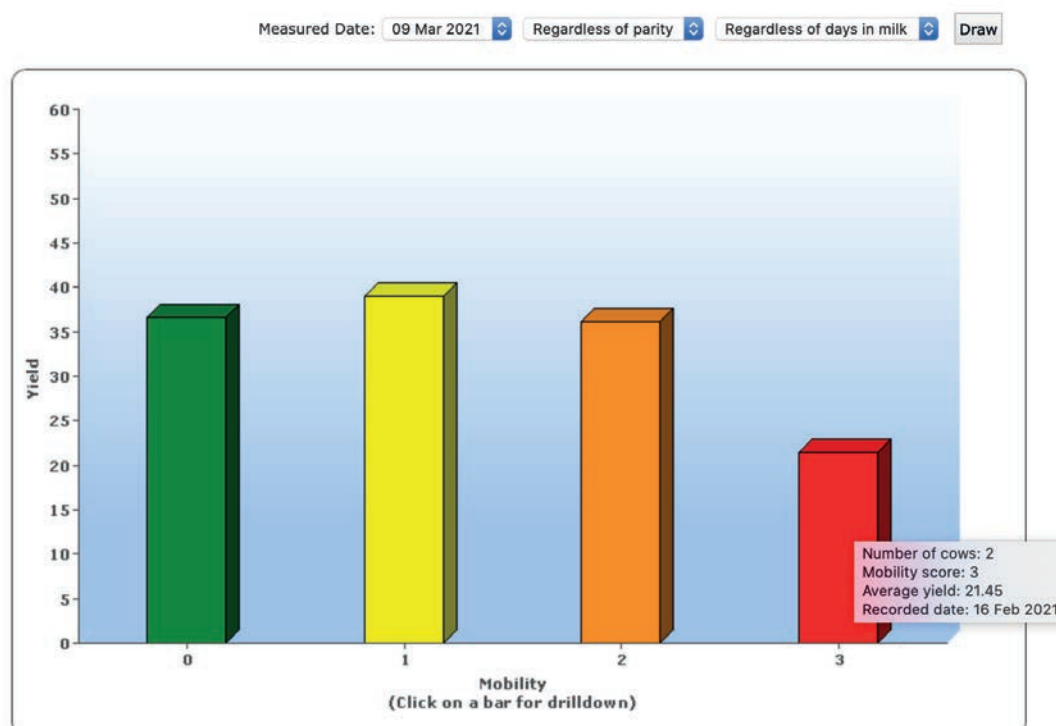

Each bar on the chart represents the scores of mobility between 0 and 3.

By hovering over each bar, you are able to see:

- Number of cows
- Mobility Score
- Average Yield
- Recorded Date

To view which cows have been scored with each mobility score, select each bar which will take you to a new window where the animal's details can be viewed.

Your Herd - Average Mobility/Yield Graph

2.2.9.2 Lameness Percentage by Lactation Graph

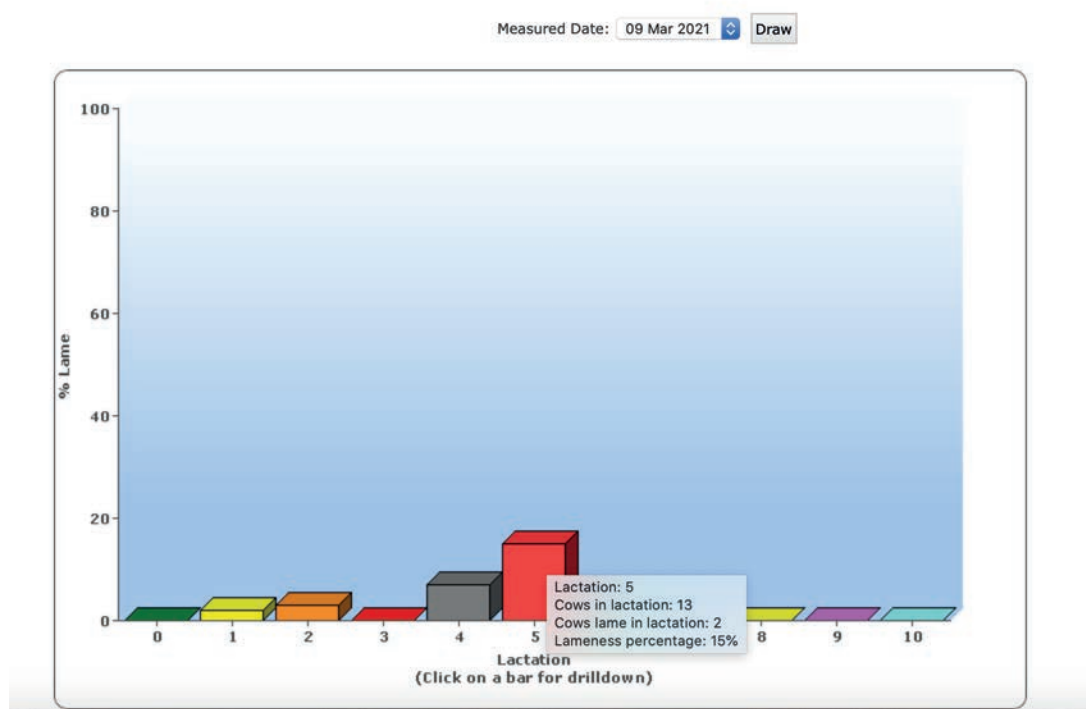

The Lameness Percentage by Lactation Graph displays the percentage of cows lame in your whole herd in different lactations. This chart can be sorted by date measured by selecting the measurement date from the drop down menu. Select 'Draw' to update the graph.

By hovering over each bar, you are able to see:

- Lactation Number
- Cows in Lactation
- Cows Lame in Lactation
- Lameness Percentage

To view which cows have been scored lame in each lactation, select the bars which will take you to a new window where the animal's details can be viewed.

Your Herd - Lameness Percentage by Lactation Graph

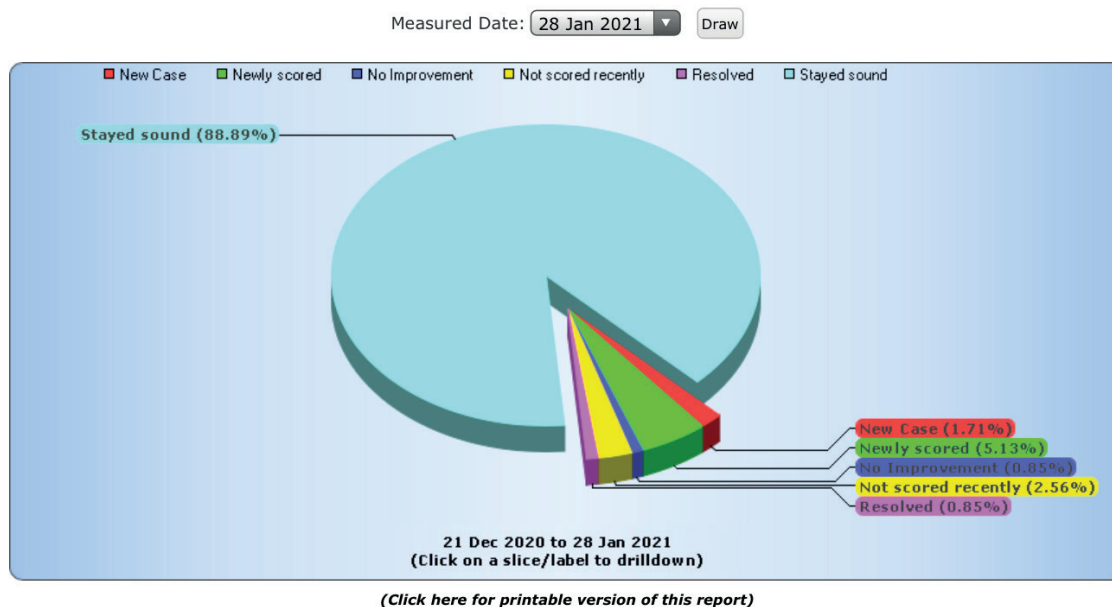

2.2.9.3 Mobility Condition Change Graph

The Mobility Condition Change Graph displays lameness as a percentage of cows that stayed sound, were resolved, are newly scored and are new cases since that last recorded measurements.

This chart can be sorted by date measured by selecting the measurement date from the drop down menu. Select 'Draw' to update the graph.

By hovering over the different sections you are able to see how many cows are included in the percentage of cows measured.

Your Herd - Changes in Mobility Scores since Last Recording Graph

2.2.9.4 Mobility Report

The Mobility Report displays recorded mobility, cleanliness, condition and abrasion data in a tabulated format.

2.2.9.5 Mobility Trend Graph

A graphical chart that displays trends of mobility as a percentage of your whole milking herd in each month over a rolling period.

By hovering over each bar, you are able to see:

- Number of cows in the herd for that month
- Number of cows scored 0
- Number of cows scored 1
- Number of cows scored 2
- Number of cows scored 3
- Number of cows absent from recording

2.2.10.1 Health Test Graph

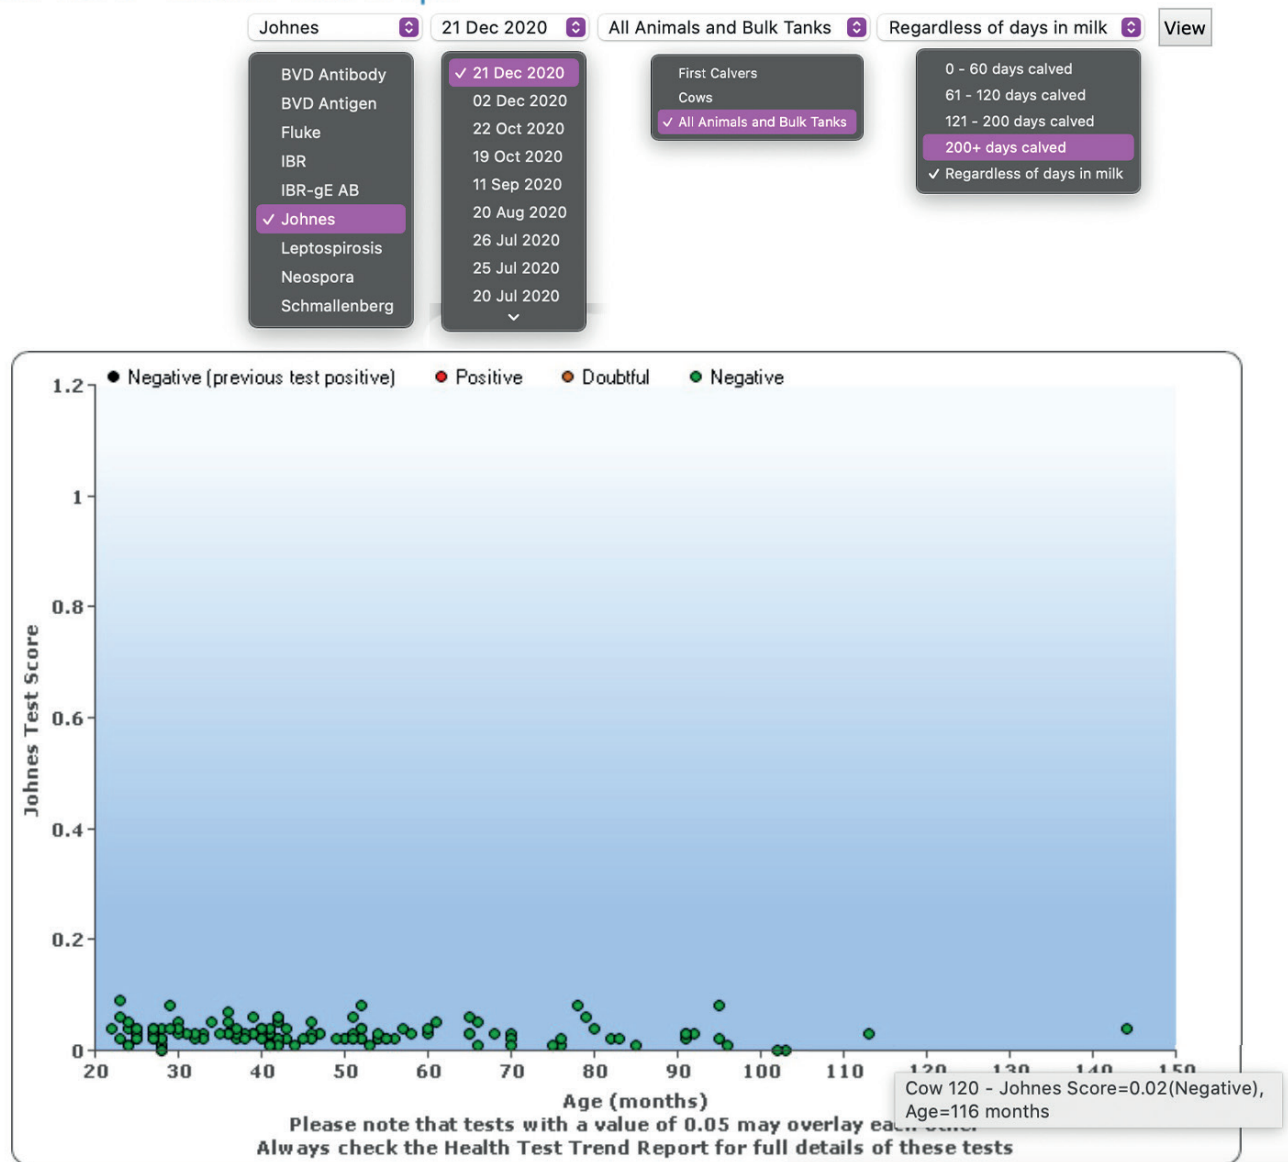

The Health Test Graph displays the diseases tested within your herd. From the drop down at the top of the page, select which disease you wish to view. You can also select which date and group of animals you would like to see.

Each circle on the graph represents one animal in your herd. By hovering over the circle you are able to see the Cow Number, Disease Score, Positive/Negative and Age in Months.

To view health test history of the cow, simply click the circle which will then open a new window.

When in the new window, hovering over each point will show the test date and score of the cow. Animal details can also be viewed by selecting the link at the top of the page.

Your Herd - Health Test Graph

2.2.10.2 Health Test Trend Report

The Health Test Trend Report displays the diseases tested within your herd. When selected, a new page will open where you are able to choose which disease you wish to view. You can also select which results you would like to see and in what order.

When the report has loaded, the results will be shown as a trend over the last year within your herd in a list of each individual result.

Unless otherwise stated, all results are expressed on an as received basis. * DIM figure will only be displayed for animals in a current open lactation with at least one health test since last calved.

2.2.10.3 Johne's Control Report

The Johne's Control Report is a visual way to view your potential Johne's problem cows to discuss with your vet. You can select which results you would like to view and the order for them to be displayed from the dropdown sections. When results are loaded, you have a visual colour aid for both the cow and her dam. If you click 'Test History', a graph for all disease tests that animal has had in her lifetime will be displayed. 'View' brings up the complete cow overview options.

2.2.10.4 Health Test Trend Graph

The Health Test Trend Graph displays the diseases tested within your herd. From the drop down menu at the top of the page, simply select which animals you wish to view.

Each point on the graph represents the date a health test was completed, and shows the average value in your herd at that date. By hovering over the point you are able to see the Disease Tested, Disease Score, Number of Samples and the percentage of Positives, Negatives and Inconclusives.

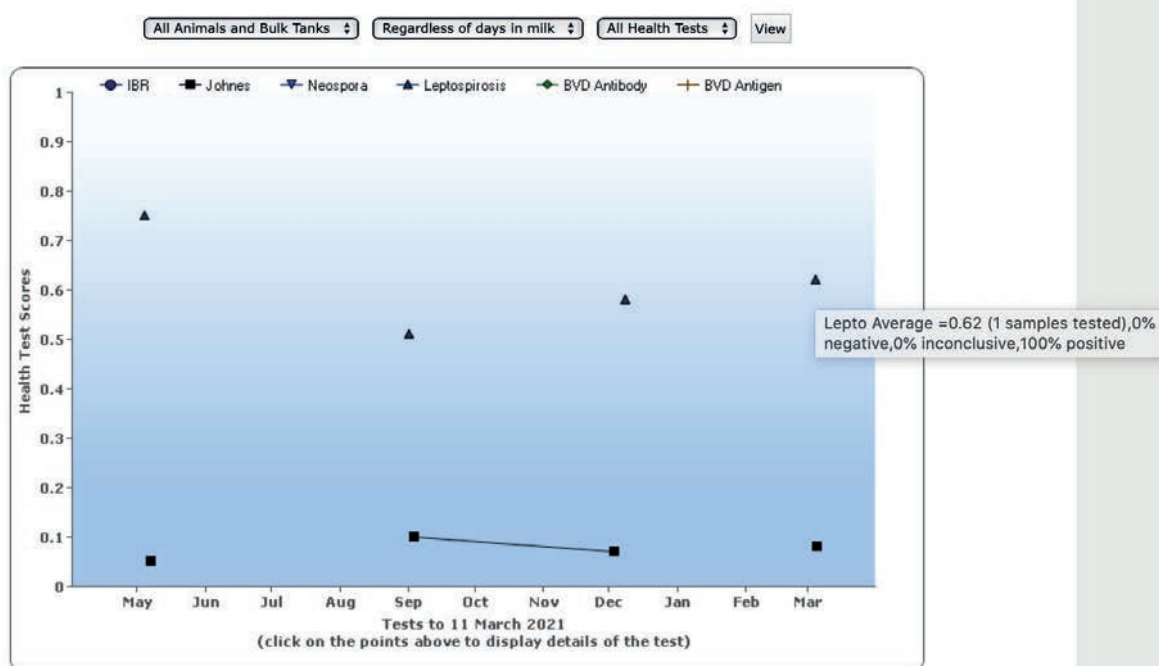

To view a test in more detail, simply click the point which will then open a new window.

When in the new window, hovering over each point will show the Cow Number, Disease Score and Age in Months.

This graph can be sorted to view other diseases by selecting the options from the drop down menu.

To view the scores of each individual animal, simply click the point you wish to view.

2.2.10.5 CHECS Johnes Quarterly Monitoring Scheme

[<<< Back to Health Test Analysis](#) | [? Help](#)

CHECS Test details

Date last Recorded : 22 Dec 2020

Date last TB Test : 29 Feb 2020

2.12% (17 out of 803) of known alive animals are replacements

Green *LOW RISK - non-infectious, potentially non-infected (old cows tend to be 'safer' than young cows) candidates for the colostrum bank.

Yellow *HIGH RISK - Require high standards of hygiene around calving. No colostrum/milk used for calves

Red *HIGH RISK - Potentially to be culled prior to the next calving and not allowed near the calving area. No colostrum/milk used for calves

Blue *Animal was born out of a High Risk cow

Infection Group code description

- A0 - repeated negative (minimum 2 samples);
- A1 - negative, but only 1 test result (usually at the beginning of the 1st lactation);
- A2 - last test negative but positive within previous 3 tests;
- A3 - last test negative but positive in previous test;
- A4 - last test positive;
- A5 - two or more positive results in previous 4 tests;

Overall Herd Infection Prevalence is 1.84% [Low : <5%]*

The recent milk sampling suggests a low prevalence of Johnes disease in the milking herd. A Johnes control plan should be designed in conjunction with your vet, focussing on identification of infected animals and minimising transmission of the disease. Herds buying in cattle should ensure these animals are from a low risk source.

* Overall Herd Infection Prevalence is worked out by dividing the number of alive animals with a JohnesGroup of A4 and A5, by the total number of alive **tested** animals in the herd.

Recent herd situation:

Percentage of Positive cows compared to last test is -00.40 %. (5 out of 293 this test, 6 out of 285 previous test)

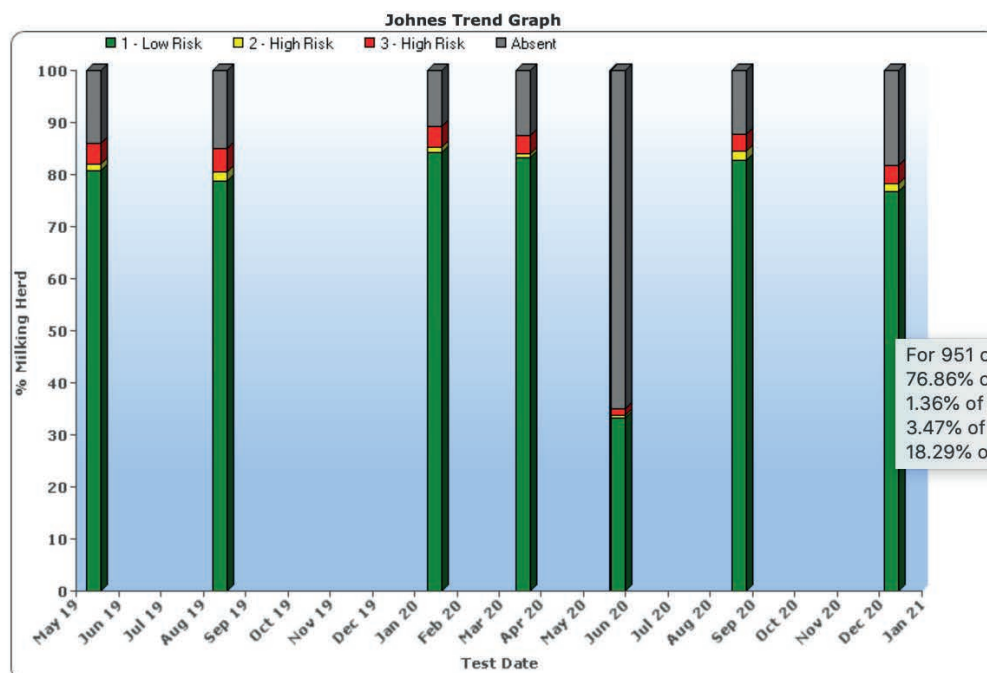

The recent milk recording has shown an decrease in the number -00.40 % of High cows compared to the previous test

[View your Johnes Control Report here](#)

[View calving animals here so that cows can be separated for calving](#)

Date Tested	Date Received	Total Samples	Negative	Positive	Doubtful	Approved	TB Test Data	Exceptions	Date Approved	Vet Comments
16 Nov 20	11 Nov 20	293	285	5	3	✓			26 Nov 20	You have 2 chronically infected (A5) animals, cows 74 and 2732, who should be earmarked for cull. You have 3 newly positive animals who should be retested as soon as possible via milk, blood or faecal tests. Calves are at high risk of Johnes infection. Positive animals must be kept away from calving yards and youngstock.
19 Aug 20	12 Aug 20	285	278	6	1	✓			20 Aug 20	You have 3 confirmed A5 cows - these should be culled ASAP, and kept away from any young stock to limit infection while they are on the farm. They should be kept away from group calving yards & prevent their milk from being fed to calves. You have a further 3 new positives (A4s) - we recommend retesting these cows ASAP to either confirm the disease & allow swift culling, or to give you increased confidence that these cows are appropriate to retain in the herd. Faecal (muck) testing may be the most appropriate for this purpose - please speak to your NJMP accredited vet for more advice.

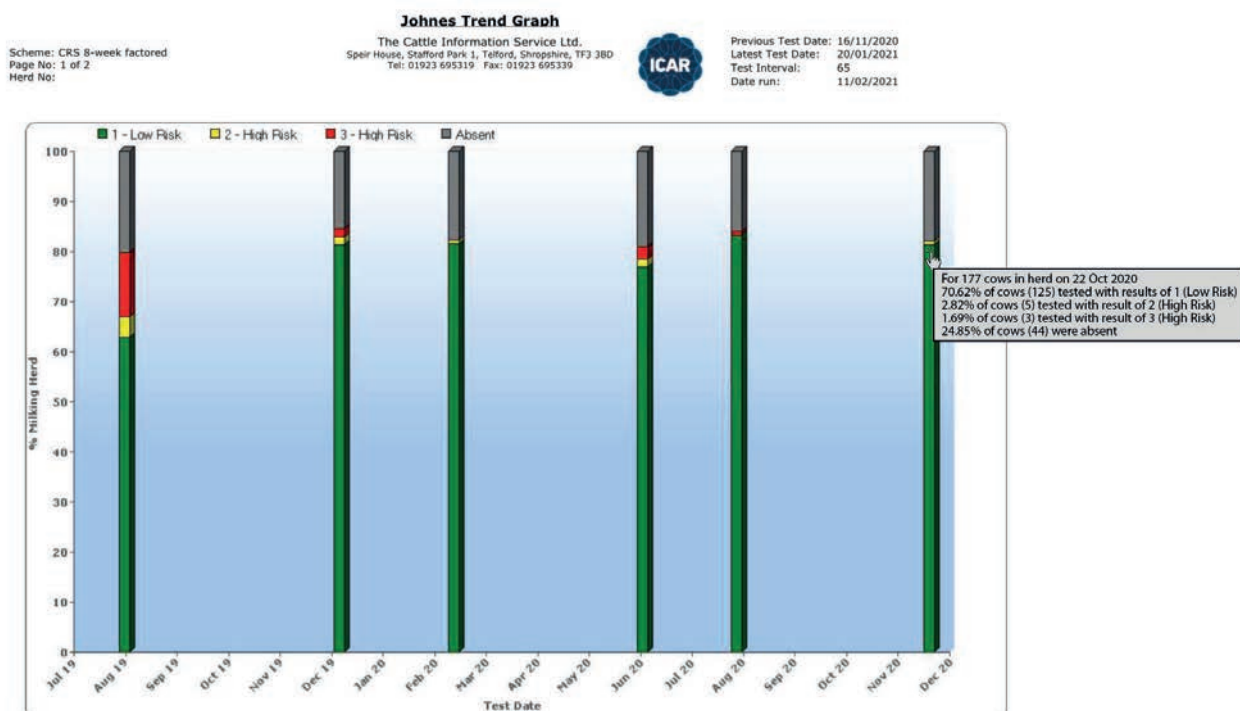

* To view positive or doubtful animals click on the number in the column

2.2.10.8 Health Test Analysis - Test Results

Within the Health Test Analysis section of YourHerd, the user can run reports to see results for various tests which have been undertaken.

For further information about the diseases, visit the [Health Testing page](#)

Results in this section are available for:

- Health Test Tissue Report
- Fluke Test Results
- Schmallenberg Test Results
- IBR-gE AB Test Results
- Blood Test Results
- PCR Health Test Results

The below image shows the options you will see when running a report.

Report Options

2.2.10.9 Fluke Test Results

FLUKE RESULTS FOR 01 JAN 2015 TO 28 JAN 2021

Scheme: CRS Monthly
Page No: 1 of 1
Herd No:

The Cattle Information Service Ltd.
Speir House, Stafford Park 1, Telford, Shropshire, TF3 3BL
Tel: 01923 695319 Fax: 01923 695339

Previous Test Date: 25/11/2020
Latest Test Date: 28/12/2020
Test Interval: 33
Date run: 28/01/2021

Line No	Barcode	Breed	AnimalName	HBN	Received at Lab	Reported Date	Test Type	Test Score	Test Result
Tank1	2552					01 Dec 2020	FLUKE	0.01	Negative
Tank1	2552					01 Sep 2020	FLUKE	0.01	Negative
Tank1	2552					02 Jun 2020	FLUKE	0.00	Negative

2.2.10.10 Schmallenberg Test Results

SCHMALLENBERG RESULTS FOR 01 JAN 2018 TO 18 FEB 2021

Scheme: AMR Monthly fact
Page No: 1 of 1
Herd No:

The Cattle Information Service Ltd.
Speir House, Stafford Park 1, Telford, Shropshire, TF3 3BL
Tel: 01923 695319 Fax: 01923 695339

Previous Test Date: 13/01/2021
Latest Test Date: 10/02/2021
Test Interval: 28
Date run: 18/02/2021

Tank1	2551					26 Oct 2020	SCHMALLENBERG	0.47	Positive

2.2.10.11 IBR-gE AB Test Results

IBR gE AB is the results of animals that are vaccinated with a marker vaccine, recommended if you buy in animals and you do not know the status of them. The results are from 0.70 upwards are negative and if you have freshly vaccinated it will be a high number, below 0.69 will show a positive result.

IBR-GE AB RESULTS FOR 01 JAN 2020 TO 20 JAN 2021

Scheme: AMR Monthly
Page No: 1 of 1
Herd No:

The Cattle Information Service Ltd.
Speir House, Stafford Park 1, Telford, Shropshire, TF3 3BL
Tel: 01923 695319 Fax: 01923 695339

Tank1	2551064					04 Feb 2020	IBR-GE AB	0.81	Negative

2.2.10.12 Blood Test Results

BLOOD TEST RESULTS FOR 28 OCT 2020 TO 28 JAN 2021

Scheme: Official scheme
Page No: 1 of 11
Herd No:

The Cattle Information Service Ltd.
Speir House, Stafford Park 1, Telford, Shropshire, TF3 3BD
Tel: 01923 695319 Fax: 01923 695339

Previous Test Date: N/A
Latest Test Date: N/A
Test Interval: N/A
Date run: 28/01/2021

For BVD Antigen results, where a positive or inconclusive result is reported the animal should be isolated and re-sampled a minimum of 3 weeks but not more than 42 days from the first sample. Their dam should also be tested. This is to confirm that the animal is persistently infected rather than transiently infected. This may be either a blood sample or a tissue sample.

Line No	EarTag	Breed	AnimalName	HBN	Received at Lab	Reported Date	Test Type	Test Score	Test Result
0000	UK0000007*****				20 Jan 2021	26 Jan 2021	BVD Antigen	0.00	Negative

2.2.11 Mastitis Monitor

The Mastitis Monitor can be used to look at previous cases of mastitis within the milking herd, after each milk recording. Target figures for cases of mastitis can be calculated and goals can be set to help reduce future problems.

When using the Mastitis Monitor, please note that:

- Any bought in animals since the previous test are ignored.
- Zero value cell counts (estimates) are filtered out.
- Clinical mastitis is evaluated by looking at the first mastitis case for each 'in milk' cow in its current lactation. If the cow is 'in milk' at the recording, it will be counted in the total, even though the mastitis case was a few recordings ago. This is therefore a rolling count of cases in the current lactation for 'in milk' animals.
- Sub-clinical mastitis is measured by Somatic Cell Count values and the changes between tests.
- SCC percentages are worked out as follows

First test

Cows low to high	Number of low to high / total number of cows low last recording
Cows high to high	Number of high to high / total number of cows high last recording
Cows high to low	Number of high to low / total number of cows high last recording
Heifers calving high	Number Heifers calving high / total number of heifers this recording

Lactation

Animals low to high	Number of low to high / total number of lactation animals
Animals high to high	Number of high to high / total number of lactation animals

DEMO HERD / 10346			
Mastitis Monitor 20 Jan 2021

2.3.1 Rankable Herd List

The Herd list provides the ability to view all the animals in your herd. The first time you visit the page it will show you all of the animals in your herd, ordered by Line Number.

To search for specific animals, use the filter fields at the top of the page.

If the animal is a pedigree, the name of the animal can be selected within the list to view the pedigree certificate.

The £ per day is the lifetime financial value divided by the number of days the animal has been alive. The financial value is worked out by taking total kg of yield between tests and multiplying by the pence per litre at each test, divided by 102.97 to convert the value to litres.

Complete Cow

Production PTA is a statistical estimate of the genetic merit passed to progeny by each of its parents. Each PTA is given in the units used to measure the trait. The PTA for milk is reported in kilograms, the PTA for productive life is reported in months and reliability is recorded as a percentage.

Viewing the report

(S) by a Service Sire name indicates Sexed Semen

(T) by a Service date indicates multiple embryos detected

(Remains on the "Ready to PD" report so after 100 days you can check for re-absorption)

If you are testing for Johnes, there is colour coding indicating which animals have been tested and their current status.

Green - LOW RISK - Older cows ideal for Colostrum production. Green cows may calve with other Green cows

Yellow - HIGH RISK - Require high standards of hygiene around calving. No colostrum/milk used for calves

Red - HIGH RISK - Potentially to be culled prior to the next calving and not allowed near the calving area. No colostrum/milk used for calves

Blue - Animal is out of HIGH RISK cow

Johnes's scores illustrated within the colour blocks refer to the following:

A0 – repeated negative (minimum 2 samples)

A1 – negative, but only 1 test result (usually at the beginning of the 1st lactation)

A2 – positive on last sample and negative on previous test

A3 – last 3 tests negative, but with 1 previous positive result

A4 – last result negative, but more positive results have occurred previously (fluctuating response)

A5 – 2 consecutive positive results

Milking Herd Due 1st Service In next 120 days ☐ Show All

For ET animals the recipient dams' Johnes test status is shown and used to create the blue code for untested animal

2.3.3 Brinkmanship Graph

The Brinkmanship Graph can be used to compare your own herd with your previous years recordings.

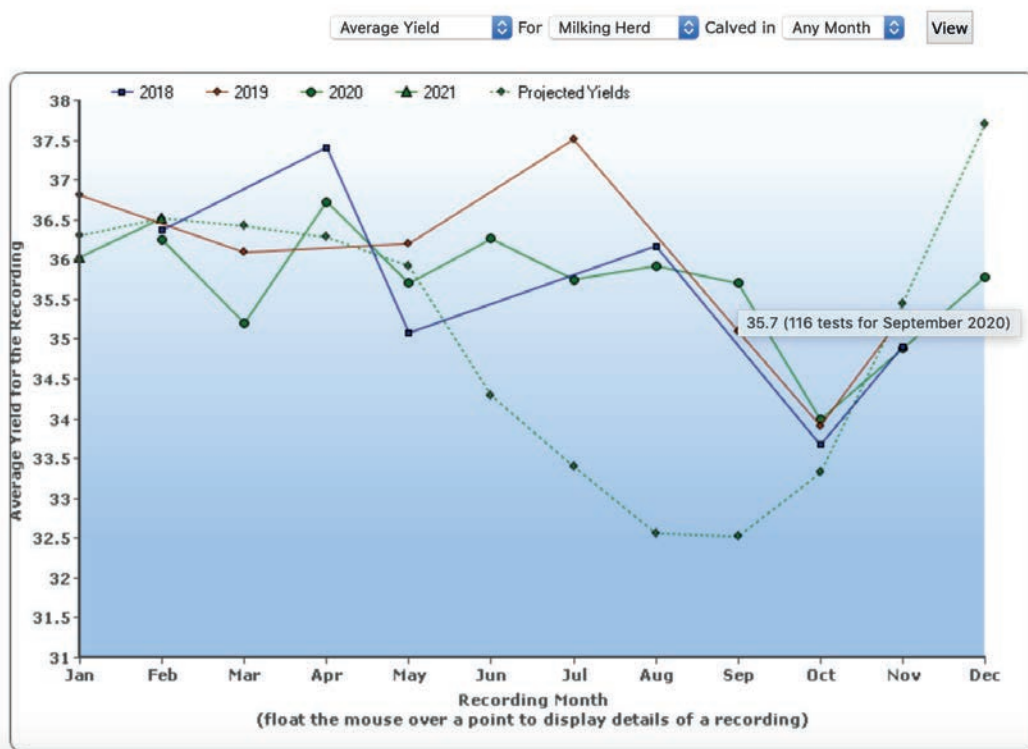

You can choose to compare average yield, fat, protein, cell counts and urea for the milking herd or broken down by parity.

Animals shown are those milking within that month regardless of the number of days they are in milk.

You may view the groups of animals by calving month.

By floating your mouse over a point, you can show details for that recording. Please note that if two points are very close, you may not initially be able to show the details for both recordings. If this happens, hover your mouse on the line near to the recording to see further results.

Your Herd - Brinkmanship Graph

2.3.4 Benchmark Graph

The Benchmark Graph enables users to see how your own herd is performing against other herds.

Running the report

To run the report, you must select your criteria from the options shown in the image below.

- The dotted lines in the background on the graph show the percentage of other herds within the chosen demographic

Your Herd - Benchmark Graph

2.3.5 Benchmark KPI Graph and Report

The Benchmark KPI Graph enables users to compare their herd KPI's with other herds.

Viewing the report and graph

When viewing the report, please note the following:

- **Yield per Year of Life:** 365.25 multiplied by the lifetime yield divided by the number of days between each individual animal's date of birth and the latest test date. This is calculated for all alive animals in the herd.
- **Lactation Period Yield:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Lactation Cumulative Yield:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Length of Lactation:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Cell Count:** The value taken from the latest completed lactations for alive animals, if qualifying. (Weighted value)
- **Butterfat %:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Protein %:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **No. of Lactations:** The average number of lactations for all alive animals in the herd at the last recording date.
- **% Heifers:** Percentage of cows in their first lactation present on the recording date.
- **Age at First Calving:** 30.44 multiplied by the average calving age of all animals in their first lactation.
- **Age at First Calving (All Lactations):** 30.44 multiplied by the average calving age of all animals in any lactation.
- **Calving interval:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Calving interval (All Lactations):** The value taken from all completed lactations for alive animals, regardless of qualifying status.
- **Cows in Herd:** The value is the actual number of alive cows present when the page is requested.
- **Days Dry:** The value taken from the latest completed lactations for alive animals, if qualifying.
- **Yield per Year:** 365.25 multiplied by average of the (total milk weight divided by the number of cows in herd) for all recordings in the previous twelve months.
- **Butterfat per Year:** 365.25 multiplied by the average of the ((weighted butterfat percent multiplied by the total milk weight) divided by (100 multiplied by the number of cows in herd)) for all recordings in the previous twelve months.
- **Protein per Year:** 365.25 multiplied by the average of the ((weighted protein percent multiplied by the total milk weight) divided by (100 multiplied by the number of cows in herd)) for all recordings in the previous twelve months.
- **% Culled:** The number of cows culled over the 12 month period expressed as a percentage of the average cow population in the same 12 month period.
- **% Died:** The number of cow deaths during the 12 month period expressed as a percentage of the average cow population during the same 12 month period.
- **Average Daily Lifetime Yield:** The average daily lifetime yield for all alive animals in the herd.

Nb. Some of the KPI's are calculated from the Annual Summary data and for newly registered herds, these values will not be available until a full year's data is available to analyse

Benchmark Key Performance Indicators Graph

Criteria can be selected on Breed, Yield, Herd size and either by region or whole of UK to compare your herd with other CIS herds, set by selected criteria. To run the graph, you must select your criteria from the options shown in the image below.

2.3.7 Seasonal Trend Graph

The Seasonal Trend Graph and Table displays regional trends of production throughout Great Britain.

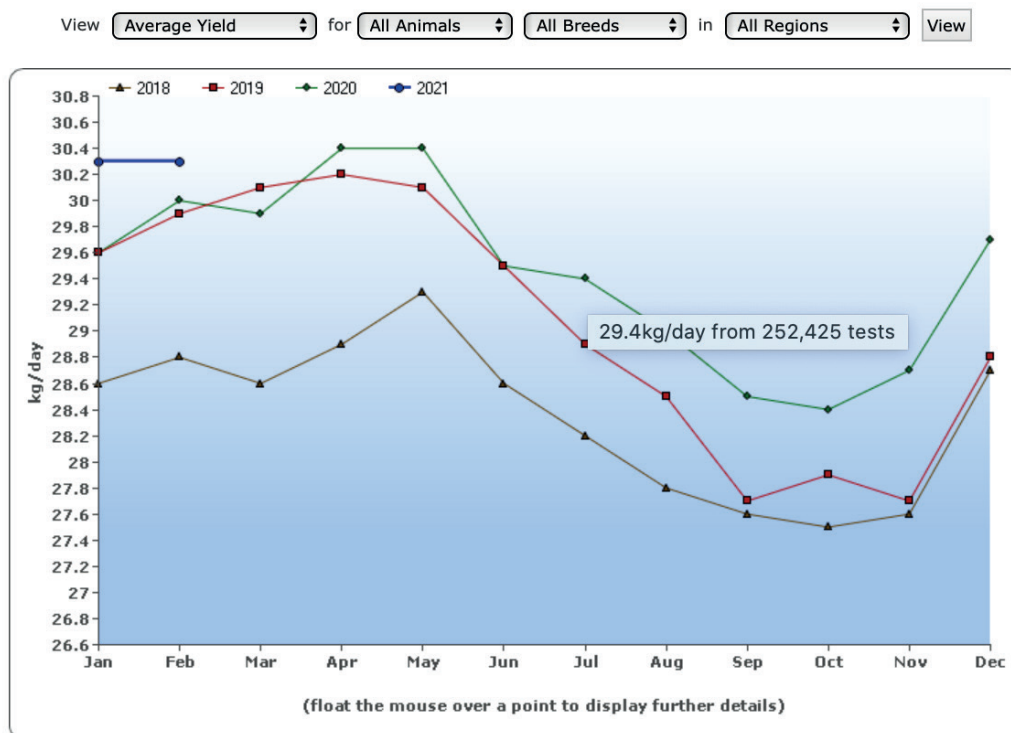

From the drop down menus, select which production value, pedigree status, breed and region you wish to view.

The production values which can be viewed are:

- Average Yield
- Average Fat %
- Average Protein %
- Average Cell Count

By hovering over each point on the graph you are able to view the average test result and the number of animals tested.

2.4.1 Reconcile Eartags with BCMS

- You can use this option to compare which animals are on CIS and on your holding
- You login to CTS online and download a CHD2021020WEP12345.csv file from your page on CTS
- Save the file to your selected drive
- Load the file into YourHerd
- Click on Reconcile the eartags – this will then match all eartag numbers which are on CIS and CTS. A list is then populated with the following headings:
 - Matched
 - Only found in CTS
 - Only Found in Herd
 - This is a tool to double check we have the correct animals on our system
- Please note that BCMS will not be notified

Your Herd - Reconcile Eartags

Step 1 - Logon onto the BCMS website and download your Herdlist from CTS Online **(Click here to go to CTS Online)**

Step 2 - Select the downloaded file Choose File no file selected

Step 3 - Load the file Load The File

Step 4 - Reconcile the eartags Reconcile the Eartags (this may take a little time so please be patient)

Step 5 - View the results of the reconciliation

2.4.2 Waste Management Planner

Use the Waste Management Planner to calculate how much land is required to dispose of waste.

- Enter the number of stock units and the number of months they are housed into the grid
- Additional animals can be added in the spare rows at the end of the grid
- Enter the number of hectares you have available and press 'Calculate Area Needed'

Your Herd - Waste Management Planner

	No. of Stock Units	Months Housed	Hectares Needed by Stock Unit	Total Area Needed (Ha)
Dairy Cow (650kg)	<input type="text"/>	<input type="text"/>	0.039	
Dairy Cow (550kg)	<input type="text"/>	<input type="text"/>	0.032	
Dairy Cow (450kg)	<input type="text"/>	<input type="text"/>	0.025	
Heifer Replacement 2 years+ (500kg)	<input type="text"/>	<input type="text"/>	0.019	
Youngstock 1-2 years (400kg)	<input type="text"/>	<input type="text"/>	0.016	
Youngstock 6-12 months	<input type="text"/>	<input type="text"/>	0.008	
Calf	<input type="text"/>	<input type="text"/>	0.005	
Bull	<input type="text"/>	<input type="text"/>	0.019	
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Total Hectares Available =

Calculate Area Needed

2.4.3 Log Eartag Changes

Use this section to make changes to your herd's eartags.

Simply find the animal you wish to retag either by Line Number, Eartag or Name and then enter and save the new eartag.

Your Herd - Maintain Log of Eartag Changes

Animal's Line No	<input type="text"/>
or EarTag	<input type="text"/>
or Name	<input type="text"/>
<input type="button" value="Find Animal"/> <input type="button" value="Close"/>	

2.4.4 Log Temporary Movements

Use this section to log the movement of animals on and off your farm. You can also optionally choose to inform BCMS of this movement by selecting or deselecting the check box.

- Enter the identity of the animal - Line Number or Eartag
- Select the date of movement from the calendar
- Select the box if you would like us to inform BCMS
 - An address for the farm the animal is either going to or coming from is required if you have chosen to inform BCMS
- Enter the CPH and Suffix of your farm and for the location of where the animal is either going to or coming from
- Enter the address for the farm the animal is either going to or coming from
 - Required for BCMS
- Click 'Check Data' to ensure that all fields have been filled in correctly
- When complete, click 'Add Movement' to update YourHerd

Your Herd - Log Movement and optionally inform BCMS

Animal's Line No	<input type="text" value="100"/>	Enter the Lineno or Eartag that identifies the animal
or EarTag	<input type="text"/>	
Movement Type	<input type="text" value="Off Farm"/>	
Movement Date	<input type="text" value="08-Feb-2021"/>	
Tell BCMS	<input type="checkbox"/>	Inform BCMS of the movement
Your CPH & Suffix	<input type="text" value="22/333/4444"/>	Location of your farm (format nn/nnn/nnnn)
Premises	<input type="text" value="Add New"/>	Select from list of previously used premises

<input type="button" value="Check Data"/> <input type="button" value="Add Movement"/> <input type="button" value="Cancel"/>		

2.4.5 Log Batch Temporary Movements

Use this section to log the movement of animals on and off your farm. You can also optionally choose to inform BCMS of this movement by selecting or deselecting the check box.

Please see information below for a step-by-step guide

Step 1

- Select the date of movement from the calendar
- Select the box if you would like us to inform BCMS
 - An address for the farm the animal is either going to or coming from is required if you have selected to inform BCMS
- Enter the CPH and Suffix of your farm and for the location of where the animal is either going to or coming from
- Enter the address for the farm the animal is either going to or coming from
 - Required for BCMS
- When complete, click 'Next'

Your Herd - Log Batch Movement and optionally inform BCMS step 1 of 3

Movement Type Onto Farm ▼	
Movement Date 08-Feb-2021 	
Tell BCMS <input checked="" type="checkbox"/>	Inform BCMS of the movement
Your CPH & Suffix 22/333/4444 <input type="text"/>	Location of your farm (format nn/nnn/nnnn)
Premises Add New ▼	Select from list of previously used premises
Remote CPH & Suffix <input type="text"/> <input type="text"/>	Location coming from or going to
Address Roundabout Farm Killingston NE12 44GH	
e.g. name of farm animal has come from or is going to	
<input type="button" value="Cancel"/> <input type="button" value="Next"/>	

Step 2

- Select the animals you would like to move from the predefined list by selecting the relevant tick box
- Any issues with moving an animal will be highlighted next to the animal in the list in red
- Once all the animals you want to move have been selected then click Select List Animals

Your Herd - Log Batch Movement step 2 of 3 - Select animals to move

Select Listed Animals			
Line No	EarTag	Animal Name	Select

0000	000000102297	PUNCH FRAGILE 43	<input type="checkbox"/>

2.4.7 Official Herd Register

The Official Herd Register displays all animals currently registered on your farm. It is essential to keep an accurate and up-to-date register of your herd. Failure to do so could lead to a loss of single farm payment and/or prosecution.

When selected, you will have the option to choose which animals you wish to view and in what order from the drop down menus.

The following birth and movement time-scales are required for YourHerd:

- 36 hours for movements on to a holding
- 14 days for the birth of any animal
- 7 days for death
- Within 36 hours of replacing ear-tags

- Serve a Group of Animals ?

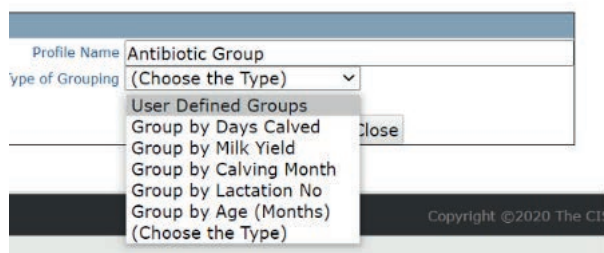

2.5.1 Manage Profiles and Groups

- First create a profile and define how you want to group the animals (e.g. Lact No, Yield, Calving Month, Age)
- Then create the groups you want to include the animals in (e.g. 0-18 months, 19-48 months, 49-99 months)
- You can then run reports for the group with the option to serve animals in a group
- Animals can manually be moved into different groups

Add a Profile Name for a new group

3.2 Statement of Milk Records

A new statement will be available after each milk recording, it provides individual animal information for the milking herd along with a whole herd overview as a PDF or Excel download. If you choose the paperless option, it is advised that you download these sheets after each milk recording as the statement will be superseded after each milk recording.

3.6 Annual Statement of Terminated Lactations

Any animal having a qualifying lactation is included in this report. The qualifying lactation year is from 1st October to 30th September. Animals marked with a NQ are non-qualifying animals.

*Means qualified the previous year.

Qualifying Lactation criteria is:

- At least 5 milk recordings within the Lactation.
- Must use ICAR approved milk recording service – NOT QUARTERLY
- Must use ICAR approved sampling devices – samplers which can be calibrated and have a yield reading
- Must have calved on holding or bought in less than 5 days calved.
- Lactation must be 305 days or more if animal is still milking - Open Lactation
- Lactation must be over 200 days if the animal has been sold, dead or dry, before 200 days, the lactation automatically closes
- No more than 2 consecutive estimates.

3.11 Cell Count Exceptions Report

Depending on the cell count parameters you have set, this report will show all animals above that parameter, the number of tests that have cell count results above that parameter, the lactation average and what the result has added to the herd average.

No. Of Tests Over 200 x10³/ml

This column gives the number of all cell count tests over 200 x10³/ml and the total number of cell count tests in the current lactation.

Cont. Herd Average %

This column calculates the percentage contribution to the herd average, which each cow is responsible for at this test.

3.12 Cell Count Profile for Last 12 Months

This report gives the cell count result for each animal over the last 12 months, along with a start date and finish date if applicable and the average cell count for the year.

3.44 Fertility 21 Days

The concept of this report is to give an overview of what the herd's service performance data is within 21 day cycles to coincide with the cows natural fertility cycle.

The Fertility 21 Days Report shows your Heat Detection, Submission & Conception Rates in the three week period, and rolling 12 month figures.

The drop down boxes at the top provides options to select different parameters to scrutinise different performance figures.

For Example:

- How many days post calving you want to serve your herd and/or how old you want to bull your heifers
- Which animals you would like displayed
 - All females / Milking Herd / Youngstock
 - All Services / 1st Services / Repeat Services

The first graph shows you the percentage of your Heat Detection Rate, Conception Rate and Pregnancy Rate over the previous 12 months on a rolling average.

The Data tab on the graph gives you the second report which is the table of information provided for the graph.

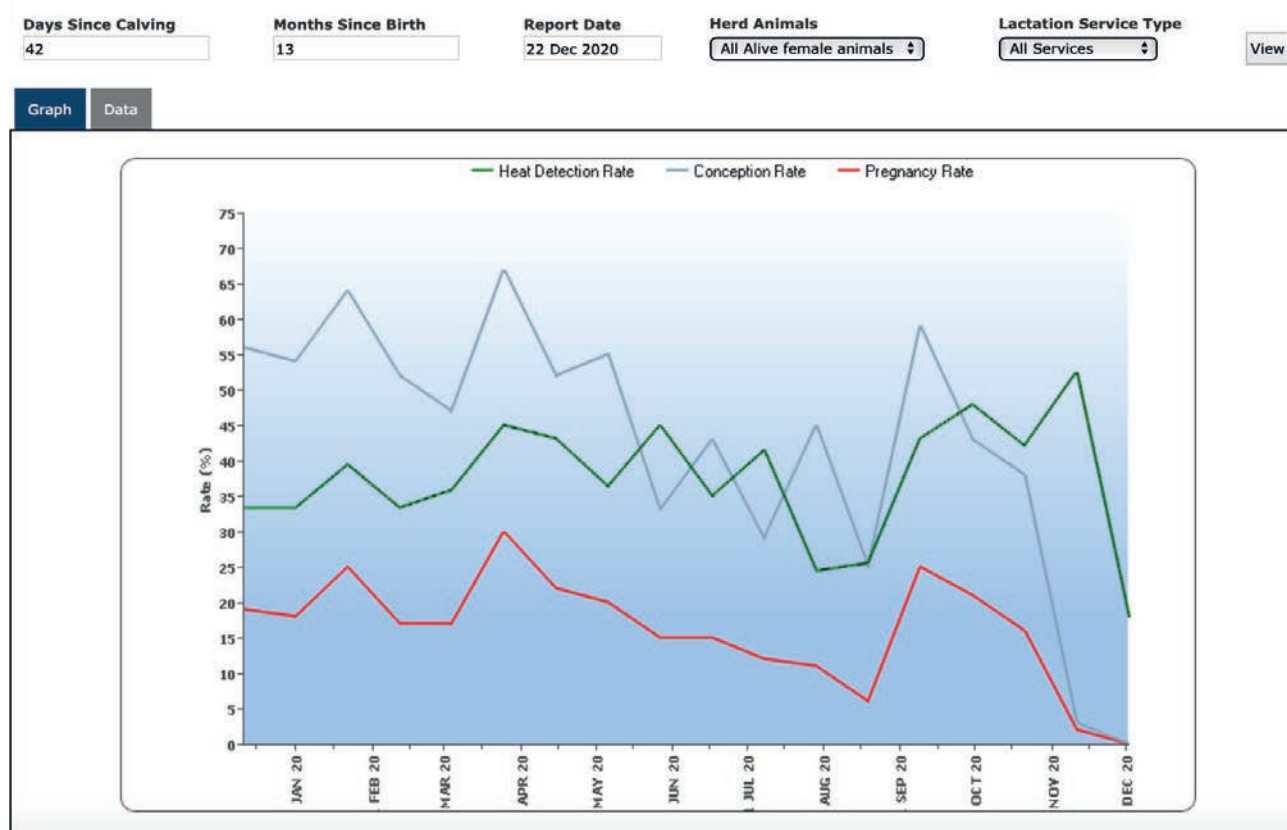

- Period 1-18 (52 weeks broken down in to three week blocks)
- Start and End date so you know which three weeks are in that period
- Cows Eligible are the cows within that period eligible to serve from your set criteria
- Cows Inseminated are the cows served in that period
- Cows Pregnant are the cows PD positive in that period (please bear in mind that they may have been served in the previous period)
- Heat Detection shown as a percentage for that period
- Conception Rate shown as a percentage for that period
- Pregnancy Rate shown as a percentage for that period

You can drill down into all these figures by clicking on view details on the right hand side for each period and it will provide a list of cows contained within that period.

This lists all the cows eligible within that period and what her status and events were in that period

With the ability to click on All results and this lists all service and PD information for that individual animal

YourHerd BCS scores range from 0 – 5, 0 is emaciated, 3 is average and 5 is grossly overweight.
Classification BCS scores range from 1 – 9, 1 is poor, 5 is intermediate and 9 is grossly fat.

4.0 Data Download Menu

This section allows you to download files for use with on-farm software.

<<< Back to Main Menu

Data Download Menu

→ Datastream	?
→ Monthly Update	?
→ CDL File	?
→ CDL File (With PD)	?
→ Total Vet / SumIT File	?
→ Lab Results File	?
→ Silent Herdsman Cow Data File	?
→ Silent Herdsman Event Data File	?

The different management companies and software available include:

- Cow Alert
- Cow Manager
- DairyComp305
- FarmWizard
- HeatTime
- Interherd
- Interherd +
- Kingswood
- Orchid
- Sense Hub
- Sense Time
- Silent Herdsman
- Sum-It
- Uniform Agri

The files which are available to download include:

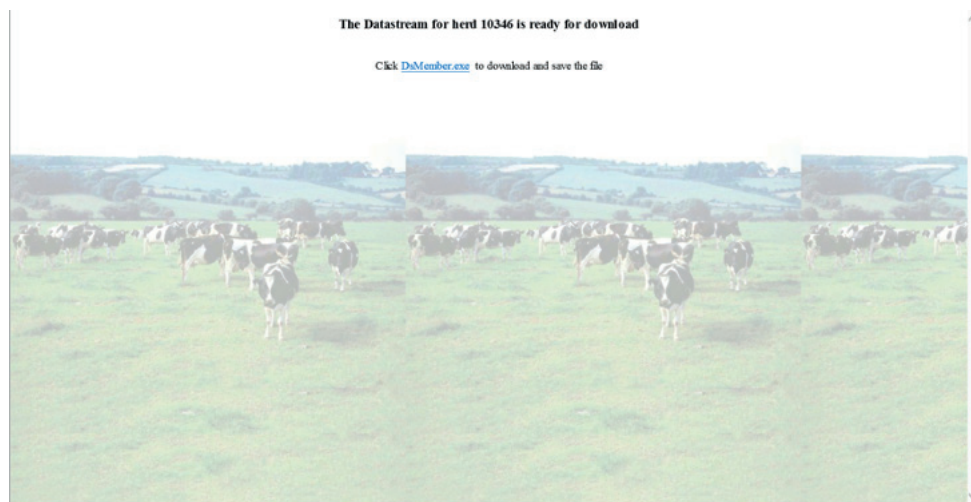

Datastream
Monthly Update
CDL File
Total Vet / SumIT File
Lab Results File

Simply select the file you wish to download, they may take a few minutes to load. Once ready, click the hyper-link to download and save the file to your PC which you can then open with your on-farm software.

4.1 Datastream

Used for populating Dairyplan (where operating system is 32bit computer), uniform, dairymaster

Click on datastream and then when the next message appears click on create dsmember.exe

A pop up message appears asking if you want to run or save the file – always save the file to a folder on the computer

If you are running a 64bit computer, please advise the CIS Processing Team who will email a file to farm after every recording has gone live.

4.2 Monthly Update

Used for populating Dairycomp

Click on monthly update and then when next message appears click on muextract.exe. For an example of this screen, view Section 4.1.

A pop up message will appear asking if you want to run or save the file – always save the file to a folder on the computer

4.3 CDL File and CDL File (with PD)

Used for populating Uniform and Sum-It as new databases, Sum-It also use this as an update file

Click on cdl file and then when next message appears click on create cdl.exe. For an example of this screen, view Section 4.1.

A pop up message appears asking if you want to run or save the file – always save the file to a folder on the computer

4.4 CDL File (with PD)

See Section 4.3

4.5 Total Vet / Sum-IT File

Used for populating Total Vet and Sum-It

Click on cdl file and then when next message appears click on create cdl.exe . For an example of this screen, view Section 4.1.

A pop up message appears asking if you want to run or save the file – always save the file to a folder on the computer

4.6 Lab Results File

Used for populating on farm programmes when recording is done as cell count only

Click on lab results file and then when next message appears click on labresults.exe

A pop up message will appear asking if you want to run or save the file – always save the file to a folder on the computer

4.7 Silent Herdsman Cow Data File

Used for populating Silent Herdsman with animal ID data only

Choose whether milking herd, youngstock or all animals is required and then run the report

Report Options

A pop up message appears asking if you want to run or save the file – always save the file to a folder on the computer

4.8 Silent Herdsman Event Data File

Used for populating Silent Herdsman with event data only

Choose whether milking herd, youngstock or all animals is required and then run report

Report Options

A pop up message appears asking if you want to run or save the file – always save the file to a folder on the computer

5.0 Johne's Control Report

The Johne's Control Report is a visual way to view your potential Johne's problem cows at a glance, to discuss with your vet. You can select which results you would like and the order for them to be displayed from the drop down sections. When results are loaded, there is colour coding for both the animal and their dam. If you click 'Test History', a graph for all disease tests that animal has had in her lifetime will be displayed. 'View' brings up the complete cow overview options.

Your Herd - Johnes Control Report

All Alive Animals ☐ Show All 1 animals shown in the results below

☒ All Alive Animals
 Milking Herd
 Youngstock
 Youngstock In-Calf
 All Animals
 Beef Animals
 Classified Animals

☒ A5 - 2 or more +ve results in previous 4
 A0 - repeatedly -ve (minimum 2 samples)
 A1 - -ve (only 1 sample)
 A2 - last -ve but +ve within previous 3
 A3 - last -ve but previous +ve
 A4 - last +ve
 Tested animals from high risk cow
 Non-tested animals from high risk cow
 All animals from high risk cow
 All Cows

For ET animals the recipient dams' Johnes test status is shown and used to create the blue code for untested animals

Dam	Cow	No.	Eartag	Identity	Level of Risk		
	A5	1590	UK000000101590	SCOTSHILLSHAMROCK CLARE 4	High - Two or more positive results in previous 4 tests	View	Test History
1							
Page 1 of 1							

- Green *LOW RISK - non-infectious, potentially non-infected (old cows tend to be 'safer' than young cows) candidates for the colostrum bank
Yellow *HIGH RISK - Require high standards of hygiene around calving. No colostrum/milk used for calves
Red *HIGH RISK - Potentially to be culled prior to the next calving and not allowed near the calving area. No colostrum/milk used for calves
Blue *Animal was born out of a High Risk cow

Infection Group code description

- A0 - repeated negative (minimum 2 samples);
- A1 - negative, but only 1 test result (usually at the beginning of the 1st lactation);
- A2 - last test negative but positive within previous 3 tests;
- A3 - last test negative but positive in previous test;
- A4 - last test positive;
- A5 - two or more positive results in previous 4 tests;

***CIS recommend you consult your vet for advice on possible further confirmation tests and an infected cow/herd management policy**

6.0 Bull Selector

Bull Selector opens in a new window which allows you to search for bulls for desirable characteristics for your herd.

This easy to use tool allows you to select the traits which you want, and at the end it will produce a list of bulls that matches the criteria you set.

Welcome to Bull Selector

The web based tool that assists dairy farmers in making informed breeding decisions in just a few simple steps.

You can set your own criteria, which can be saved, with the option to name each search criteria if you are returning to the site and wish to use previously saved criteria – use the 'load' tab to populate the search. You may wish to amend a previously saved search again this can be done as you go through the steps.

Lists created in Bull Selector can either be used in the WebMate program or exported to Excel for further use.

A Simple cost free & hassle free way to find bulls to suit you and your system!

The UK's leading, longest established unbiased and independent bull selection tool!

1. Select a breed

☒ Holstein
 ☐ Friesian
 ☐ Ayrshire
 ☐ Jersey

7.0 Health Test Trend Report

A report that displays the diseases tested within your herd. When selected, a new page will open where you are able to choose which disease you wish to view. You can also select which results you would like to see and in what order.

Negative results will be shown in green and positive results will be shown in red.

8.0 AI Stock Book

This section allows you to manage your Semen Stocks and Services

- Manage your stocks of Semen
- Identify the Inseminators you use
- Plan the services to be performed
- Print a task-list for the Inseminator
- Confirm the details of the services performed

Your Herd - AI Stock Book

<u>Maintenance</u>	<u>Inseminations</u>	<u>Reports</u>
 Maintain Semen Stock	 Request Service	 Services by Inseminator
 Maintain Inseminators	 List Outstanding Services	 Services by Bull
	 Edit/Confirm Service	 List Archived Stock

8.1 Maintenance - Maintain Semen Stock

Record the batches of straws you keep on-farm

- To add a new batch, Search for the Sire, enter the batch details, then click 'Add New Batch'
- To display a list of the currently available straws, click 'Show All Batches'
- These batch details can be edited, e.g. to record when a straw has been discarded
- Straws Allocated to a service will not be removed from the batch until the Service is confirmed
- Once all the Straws have been used up the batch can be Archived

Your Herd - Maintain Semen Stocks

Search for Sire

Type in part of the Sire's name to search
(e.g. CLA will return the the first 50 Sires with CLA in the name)

Then Select Sire

Batch Ref

Date Purchased

Straws Purchased

Price Per Straw

Comments

8.2 Maintenance - Maintain Inseminators

Identify the people who will be performing the inseminations.

Your Herd - Maintain Inseminators

8.3 Inseminations - Request Service

In this section you can manage the services you will be next performing

- On this page you can detail the services to be performed, identifying the straws, cows and inseminators
- You can then print out a list of the planned services to give to the Inseminator
- Finally you can confirm the services which actually took place, which will record the service against the cow and adjust your semen stocks

Your Herd - Request Service

8.4 Inseminations - List Outstanding Services

View a list of your outstanding services and any comments associated to each animal.

10346 List of Outstanding Services

Line No.	Eartag	Name	Batch No	Service Sire	Comments
			JW1	STORM	
			JW2	LAVENHAM GREY ACE	

8.5 Inseminations - Edit/Confirm Service

On this page you can record details of the services which actually took place

- Edit details of the cow served, date and inseminator if necessary
- Delete any requests which did not take place
- Confirming the service, will add the service to the cows records and adjust your remaining semen stocks
- Please note, you cannot change the Sire or Split Straw flag on this page, If you used a different batch (or amount of semen) you will need to delete the request and recreate it with the correct value

Your Herd - Confirm Services

9.0 Record Tesco Data

This section allows you to record and edit all data required by Tesco.

Please see information below for a step-by-step guide.

- Click 'Record Tesco Data'
- Select whether you would like to record data to an existing set of measurements or a new set
- Enter the name of the person doing the new measurements
- Select which animals are being scored
 - Milking herd
 - Youngstock
 - All animals
- Select which measurements you are recording
 - Mobility Score
 - Mobility Priority and Comments
 - Cleanliness
 - Condition
 - Abrasions
- To view data of an existing measurement click 'Run Report' to view data and select which report you would like to view
- Select 'Step 2 – Record Data' to record data
- Animals can be sorted by selecting an option from the drop down option
- Enter the data you wish to be recorded
- Mobility history can be viewed by selecting the animals ear tag
- Tesco's Livestock Code of Practice can be viewed by selecting the link at the bottom of the page
- When complete, click 'Save' and 'Run Report' to view the data

Your Herd - Tesco Data step 1 of 2 - Enter measurement date

Select an existing set of measurements

11.0 Electronic Invoices

- The first time you click on 'Electronic Invoices' click on 'Register'
- You will be asked to enter your email address twice for verification
- You will then receive a confirmation email
- Click on the link within the email
- You can view and print past and present invoices on YourHerd
- If you wish to come off electronic invoices, please speak to your Area Manager or phone CIS on 01923 695319
- Please note, if you sign up for electronic invoices, you will NOT receive paper copies

12.0 CIS CHECS Monitoring Service for Johne's Form

The CIS Johne's Approved Monitoring Service provides testing of your cattle to help manage the potential disease affecting your current and future herd.

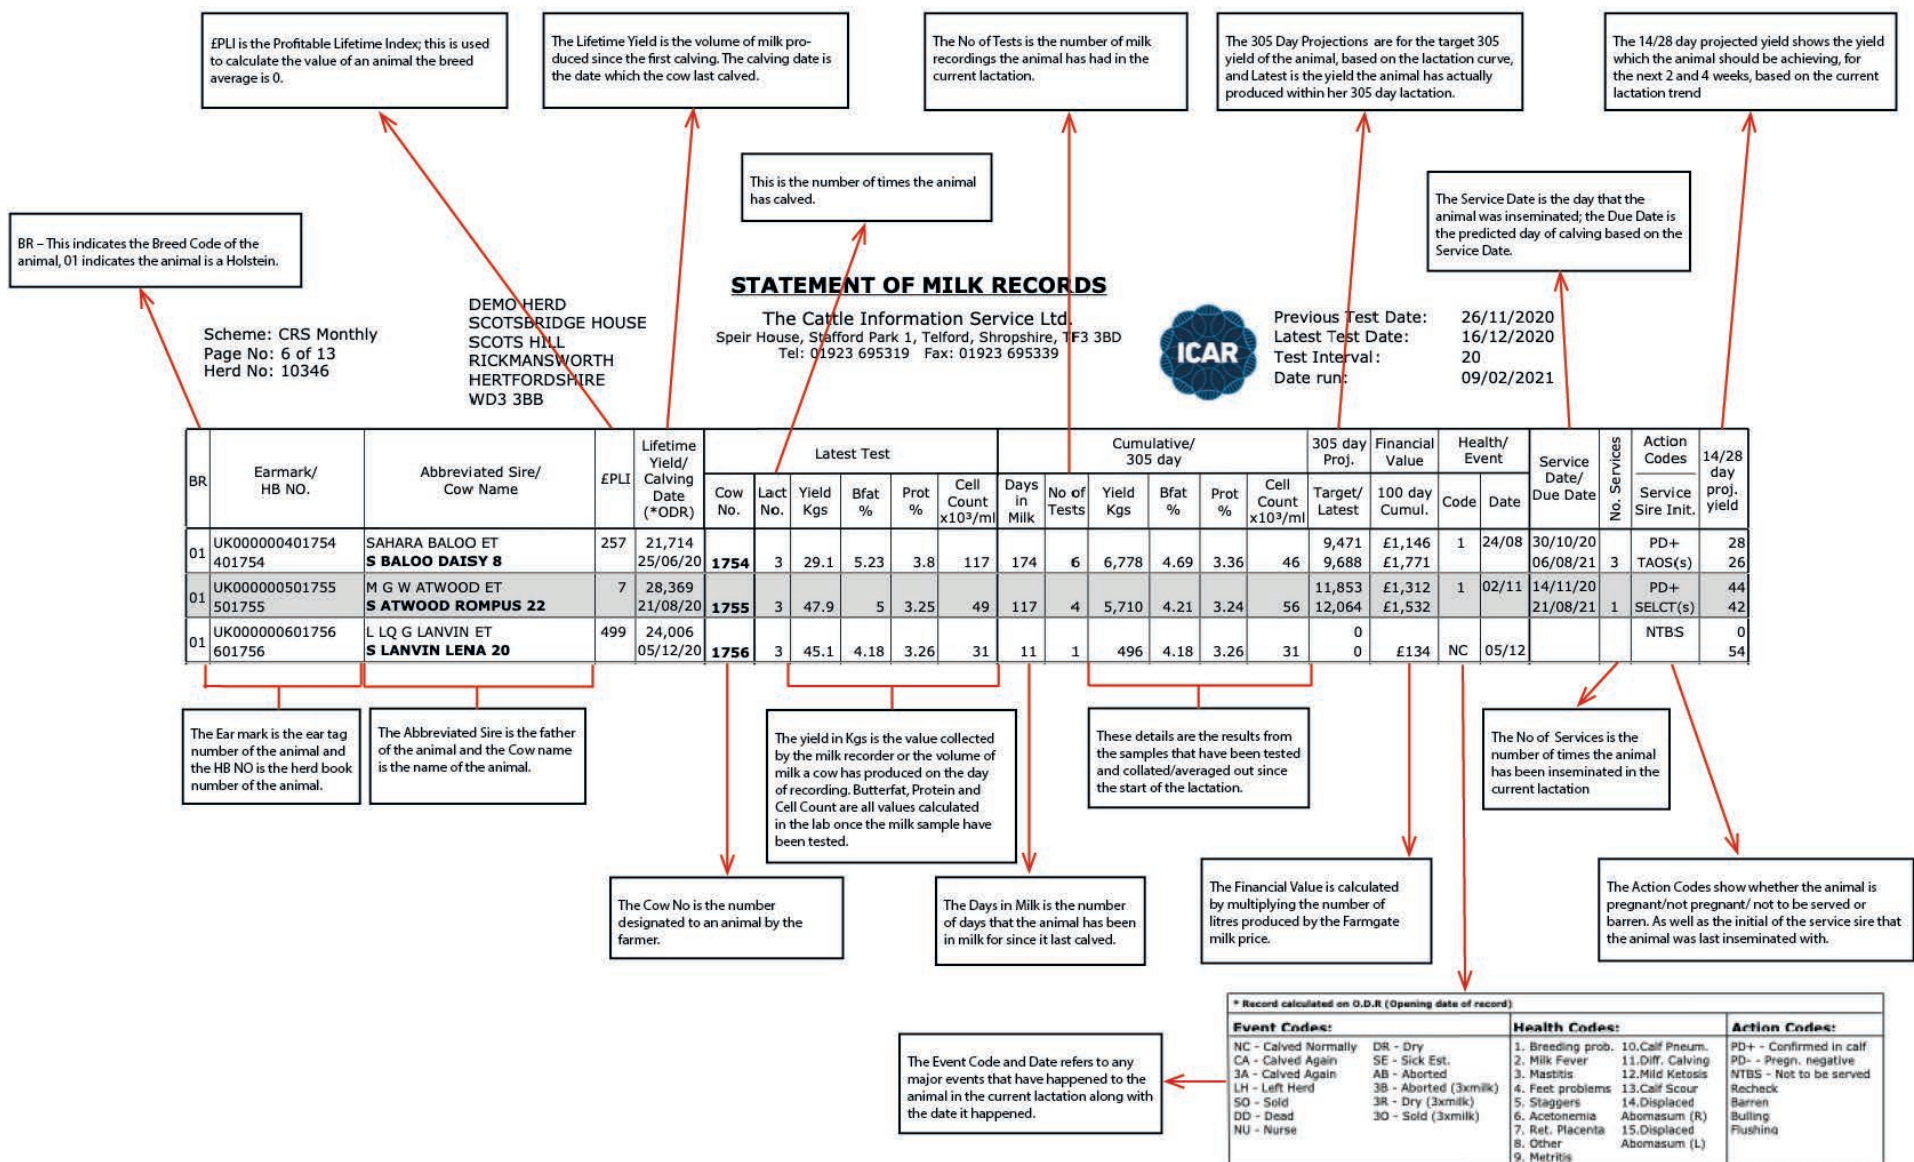

To be eligible for this service a customer must be enrolled for CIS Quarterly Johne's Health testing, have completed an application form and have all animals uniquely identified by eartag with in the CIS system.

- The application form must be signed by the customer.
- The CHECS Approved Monitoring Service for Johne's is initially set up for a minimum 12 month period which will automatically be renewed each year.
- The CHECS Approved Monitoring Service for Johne's commences the month of the first Quarterly Johne's Health test with the Cattle Information Service after the initial set up and accounts will be debited at the end of this month.
- Your nominated vet will have access to your results through CIS Advisor Access.
- Customers subscribing to CIS CHECS Approved Monitoring Service will have access to:
 - Vet support to oversee results
 - Web page to review results and Vet comments against the herd or individual animals
 - You may withdraw from the CHECS Approved Monitoring Service for Johne's at any time after the initial 12 months, subject to any necessary adjustments to fees for the services you have received.

Please note that this scheme is approved, not accredited.

To find out more, visit: www.checs.co.uk

Statement of Milk Records Explanation of Terms

Herd Management Summary Explanation of Terms

This column shows the average milk yield for each group at the current milk recording.

The Projected Income Per Day is calculated by multiplying the Average Projected Yield by the Pence Per Litre to give the farmer a projection of the average income per animal per day for the next month.

The Projected 305 Day Yield is calculated by taking the current yield and claving date per group and plotting it along the standard lactation curve and extrapolating this figure to the 305 day mark.

The Projected Financial Index is calculated using the Projected 305 Day Yield and the current Pence Per Litre. For example the very top line is calculated by taking the Projected 305 Day Yield (7560) multiplying that by the Pence Per Litre (27.24) then dividing that result by 100 then minus the average Latest Projected 305 Day Financial Value for the group (2811) therefore $((7560 * 27.24) / 100) - 2811 = -751$

H - Denotes Heifer

The No of Cows in Group shows the number of cows in each group based on the calving month, the H denotes the heifers in their first lactation.

The Cow Group shows the calving month and year for the animals in each group.

This column shows the average milk yield for each group at the previous milk recording.

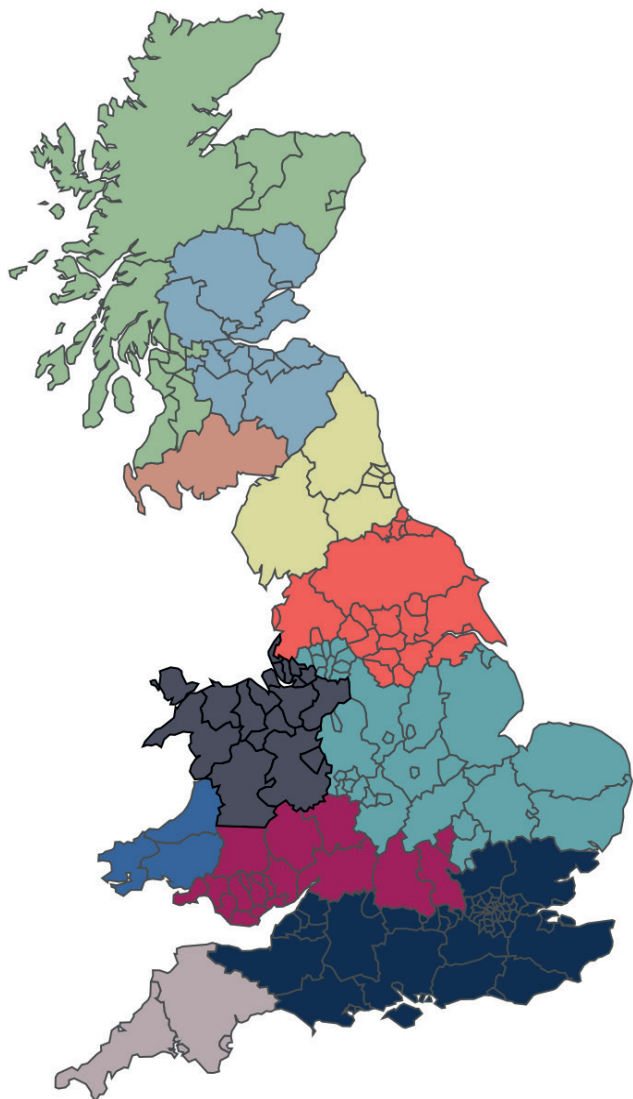

The Average Projected Yield predicts the average milk yield for the group at the next recording based on the current trend.

The Projected 305 Day Financial Value Latest £ is calculated by dividing the Projected 305 Day Yield by the Pence Per litre. The Target £ shows what the 305 day yield should be under perfect circumstances based on a standard lactation curve.

The Pence Per Litre is updated monthly based on the Farmgate prices.

The Average Calving Interval is the average amount of days that the group has been in milk without calving again.
